Data Requirements Rule (DRR) Sulfur Dioxide (SO₂) Source Identification List

Dear Mr. Daly:

Per the final DRR, the Colorado Air Pollution Control Division (Division) submits the following list to EPA. This list, required to be submitted to the EPA by January 15, 2016, identifies all sources within our jurisdiction that have SO₂ emissions exceeding the 2,000 tons per year (tpy) annual threshold during the most recent year for which emissions data are available (2014), plus an additional source identified by the Division that warrants air quality characterization.

The list is as follows:

1. Public Service Company of Colorado (PSCo) - Cherokee Power Plant
2. PSCo - Comanche Power Plant
3. PSCo - Hayden Power Plant
4. PSCo - Pawnee Power Plant
5. Tri-State Generation and Transmission Association, Inc. - Craig Power Plant
6. Colorado Springs Utilities (CSU) - Drake Power Plant
7. CSU - Nixon Power Plant
8. Colorado Energy Nations Company (CENC) - Golden*

*CENC is the additional source identified as warranting air quality characterization

The Division anticipates discussions with EPA early in 2016 to resolve any questions as to any areas that warrant air quality characterization. The Division will indicate by July 1, 2016, whether it will characterize air quality through ambient monitoring or through air quality modeling, or whether it will subject any of these sources to an emission limit below the 2,000 tpy threshold. Required protocols and documentation for applicable options will also be submitted by July 1, 2016. If you have any questions regarding this submittal, please contact me at (303) 692-3114 or Lisa Devore of my staff at (303) 692-3117.
