Acknowledgments

This report was prepared under the direction of **Stephen Andrews**, Assistant Division Chief, Manufacturing and Construction Division. Within the Manufacturing and Construction Division, the preparation of this report was performed under the supervision of **Elinor Champion**, Chief, Environment, Technology, and Innovation Branch.

Review and analysis of the MA-200, Survey of Pollution Abatement Costs and Expenditures data were performed by **Gretchen Dickson** with the assistance of **Ron Taylor** and **Ronald Scarlett**.

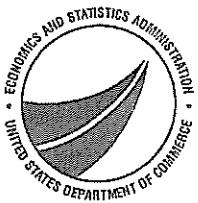

The electronic computer programs for the MA-200 were developed under the direction of **Sarah Baumgardner**, Assistant Division Chief for Manufacturing and Construction Programs, Economic Statistical Methods Programming Division. Within the Economic Statistical Methods Programming Division, the development of the programs was performed by **Steven Potemkin**, **Carl A. Bolin**, **Mark Markovic**, and **Loretta McKenzie** under the supervision of **Deborah Tasky**, Chief, Current Manufacturing Programming Branch.

Gretchen Dickson developed the programming and processing system and conducted the review and analysis of the PA-2, Plant and Equipment Survey: Supplement for Pollution Abatement.

Lillie M. Skinner coordinated the various phases of the publication process.

The staff of Administrative and Publications Services Division, **Walter C. Odom**, Chief, performed publication planning, design, composition, editorial review, and printing planning and procurement. **Cynthia G. Brooks** provided publication coordination and editing.

A special acknowledgment is due to the many businesses whose cooperation was essential to the success of this report.

APPENDIX**Report Forms and Respondent Instructions**

Form MA-200, 1993 Survey of Pollution Abatement Costs and Expenditures	A-2
Form PA-2, 1993 Plant and Equipment Survey Supplement for Pollution Abatement	A-23

Introduction

MANUFACTURING

Tables 1 through 13b present manufacturing pollution abatement costs and expenditures data. These data are collected on the Form MA-200, Survey of Pollution Abatement Costs and Expenditures. The survey has been conducted annually by the Bureau of the Census since 1973, except for 1987.

Summary of Survey Results

Pollution abatement capital expenditures by manufacturing establishments with 20 employees or more amounted to \$7,568 million in 1993. Of this total, \$7,178 million was attributable to a particular media: \$4,122 million for air, \$2,295 million for water, and \$761 million for solid/contained waste. Spending for the nonmedia and other was \$390 million.

Approximately 79 percent of the \$7,568 million new capital expenditures for pollution abatement was made by establishments classified in four major industry groups: Chemicals and Allied Products (Major Group 28), Petroleum and Coal Products (Major Group 29), Paper and Allied Products (Major Group 26), and Primary Metal Industries (Major Group 33).

In 1993, three States (Texas, California, and Louisiana) accounted for approximately 40 percent of total new pollution abatement capital expenditures. Texas comprised 14 percent of the total.

Operating costs related to pollution abatement activities totaled \$18,799. Of this amount, \$17,555 was attributable to a particular media: \$5,575 million for air, \$6,632 million for water, and \$5,349 million for solid/contained waste. Spending for the nonmedia and other was \$1,244 million.

The pollution abatement totals for the media for 1993 can be compared with the following in 1992: \$7,867 million in pollution abatement capital expenditures and \$17,466 million in pollution abatement operating costs. Total pollution abatement media capital expenditures decreased 9 percent. Air, water, and solid/contained waste capital expenditures decreased 6, 9, and 20 percent, respectively. Total pollution abatement media operating costs showed an overall increase of 1 percent. Air operating costs increased 3 percent. Water operating costs increased 1 percent. Solid/contained waste operating costs decreased 3 percent.

Information in the Tables

Historic Tables. Tables 1 and 2 show historic and summary data. Table 1 shows the data by major groups (two-digit industries), and table 2 shows the data by State.

Detail Tables. Pollution abatement capital expenditures (PACE) and pollution abatement operating costs (PAOC) are shown for the media air, water, and solid/contained waste and for the nonmedia and other. These data are shown for industries and States.

PACE data for the media air, water, and solid/contained waste are shown in tables 3 through 6c. PACE for the media totals are shown in table 3 at the two-, three-, and four-digit industry level. PACE media totals for States by major groups (two-digit industries) are shown in table 5. Detail for table 3 is shown in tables 4a through 4c at the major group level. Tables 6a through 6c show detail for table 5 at the State level.

Within the PACE detail tables 4a through 4c and 6a through 6c, the media capital expenditures are separated on the basis of abatement technique. The tables distinguish between plant and equipment designed to abate pollutants through end-of-line (EOL) techniques and those designed to reduce or eliminate the generation of pollutants through production process enhancements (PPE). Separate expenditure data also are shown in the detail tables for expenditures to abate hazardous and nonhazardous pollutants.

For air expenditures, tables 4a (industry data) and 6a (State data) show data for the major types of air pollutants (particulates, sulfur oxides, nitrogen oxides, carbon monoxide, hydrocarbons and volatile organic compounds, and lead) as a group. If an air expenditure is not for one of the major types of air pollutants and is not hazardous, it is classified as other. Analysis of these data should take into account that, where expenditures occur for a single device that has the ability to abate more than one pollutant, the classification of the device is guided by the primary purpose for which the device was installed.

Pollution abatement operating costs (PAOC) data for the media air, water, and solid/contained waste are shown in tables 7 through 11b. PAOC for the media totals are shown in table 7 at the two-, three-, and four-digit industry level. PAOC media totals for States by major groups

(two-digit industries) are shown in table 9. Detail for table 7 is shown in tables 8a, 8b, and 8c at the major group level. Tables 10a, 10b, and 10c show detail for table 9 at the State level.

Within the PAOC detail tables, data are shown for expenditures to abate hazardous and nonhazardous pollutants. Within nonhazardous water and nonhazardous solid/contained waste, costs are shown as payments to industry and payments to government.

Tables 11a and 11b tabulate the pollution abatement operating cost data for the media by kind of cost instead of by media. Tables 11a and 11b show data for all media by kind of cost: depreciation; salaries and wages; fuel and electricity; contract work/ services; and materials, leasing, and other costs. Table 11a shows two-, three-, and four-digit industry data; and table 11b shows State by major group data.

Nonmedia and other expenditures are shown in tables 12a, 12b, 13a, and 13b. Pollution abatement nonmedia and other capital expenditures are shown in tables 12a and 12b. Table 12a shows data by major group (two-digit industry level). Table 12b shows data by State. Pollution abatement nonmedia and other operating costs are shown in tables 13a and 13b. Table 13a shows data by major group (two-digit industry level). Table 13b shows data by State. The nonmedia pollution abatement expenditures are for underground storage tanks and site cleanup. Other expenditures include noise abatement, radiation abatement, multimedia, and not elsewhere classified (n.e.c.). Multimedia expenditures are for the abatement of pollutants that cross media.

Changes in Data Collection Affecting Historic Comparisons

The 1992 and 1993 MA-200 survey forms differ from previous years. These changes may affect the year-to-year comparisons of some of the results.

Some of the general terminology and definitions are changed or new:

Pollution abatement is redefined as "... for the purpose of reducing, eliminating, or disposing of unwanted emissions or wastes that are created by the production process and harmful to the environment or the removal of pollution created by prior-years production. For this survey, only expenditures with the primary purpose of protecting the environment are included." The revised pollution abatement definition replaces a reference to "pollutants" in prior definitions with "unwanted emissions or wastes." It expands the prior definition by adding the qualification "harmful to the environment" to the qualification "created by the production process." The definition then goes a step further and specifies

that expenditures qualify for reporting only if the *primary purpose* is environmental protection. It adds the reporting of expenditures to remove pollution created by production in prior years.

The techniques for pollution abatement are clarified. "Prevention" is changed to "source reduction" and "waste minimization." Definitions for these two new terms are provided on the 1992 and 1993 MA-200 survey forms. "Collection/ disposal" and "recycling" are now defined.

Instructions and the type of data collected for capital expenditures for the media are changed:

Capital expenditures now include a measure of "end of line" and "production process enhancements" (formerly changes-in-production process) for solid/ contained waste as well as for air and water. New "special instructions" explain how to report production process enhancement expenditures if it is not feasible to report only the portion intended for environmental protection.

"Percent hazardous" is now collected for water pollution abatement capital expenditures as well as for air and solid/ contained waste.

The seven types of pollutants data collected for air pollution capital expenditures are combined into three categories:

1. Hazardous
2. Particulates, sulfur oxides, nitrogen oxides, carbon monoxide, hydrocarbons and volatile organic compounds, and lead
3. Other nonhazardous air pollutants

The instructions for capital expenditures clarify that "construction in progress intended for environmental protection" is reportable.

The instructions also clarify that "recycling equipment if your primary product is recycling" is *not* reportable.

The instructions and items for the pollution abatement operating costs for the media are also revised:

The operating cost categories are changed for 1992 and 1993. Costs for "fuel and electricity" are separate from "materials and supplies." "Services," now termed "contract work/ services," is separate from "equipment leasing and other costs." "Materials and supplies" and "equipment leasing and other costs" are combined into "materials, leasing, and miscellaneous." "Labor" was renamed "salaries and wages" to emphasize that dollars spent on environmental administration are now reported in this category.

"Percent hazardous" is now collected for air and water as well as for solid/contained waste.

Form instructions clarify that the following expenses are reportable for 1992 and 1993:

- Incremental costs for consumption of environmentally preferable materials and fuels
- Conducting environmental studies for development or expansion
- Compliance and environmental auditing
- Developing pollution abatement operating procedures

Additional instructions explain that "taxes, fines, legal fees, and superfund taxes and contributions" are *not* reportable.

Though not specified in the prior-year instructions, testing and monitoring procedures and equipment were excluded from surveys prior to 1992. These costs and expenditures are reportable for 1992 and 1993.

"Cost recovered" is now termed "cost offsets." These offsets are pollution abatement operating expenses recovered as a result of pollution abatement techniques. The definition is clarified for 1992 and 1993 to specify that cost offsets must be related to production and for environmental protection.

The 1992 report showed pollution abatement expenditures for "nonmedia" and "other" for the first time. "Nonmedia" includes data for underground storage tanks and site cleanup. "Other" expenditures are for noise abatement, radiation abatement, multimedia, and not elsewhere classified (n.e.c). "Multimedia" expenditures are for the abatement of pollutants that cross media. Capital for the "nonmedia" and "other" were collected for all categories in 1992. Operating expenses were collected for all categories in 1992 except underground storage tanks. Operating expenses for underground storage tanks were collected for the first time in 1993.

Scope

The survey covers plants classified in manufacturing industries¹ by the annual survey of manufactures (ASM) with the following specific differences:

1. Establishments in Major Group 23, Apparel and Other Textile Products, are excluded from the pollution abatement survey. These establishments operate primarily in rented quarters where the abatement of pollution is generally arranged by the landlord.

¹Establishments are classified in industries by industry definitions described in the 1987 edition of the *Standard Industrial Classification (SIC) Manual* published by the Office of Management and Budget. (For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Stock No. 041-001-00314-2.)

2. The sample does not include establishments with fewer than 20 employees. Early surveys showed that establishments with fewer than 20 employees contributed only about 2 percent to the pollution estimates while constituting more than 10 percent of the sample size. No adjustment is made to account for these establishments.

Methodology

The 1993 survey results are based upon a probability sample panel of approximately 17,000 establishments selected as a subsample of the 1989 ASM. The ASM is, in turn, a probability sample selected from the 1987 Census of Manufactures, which is supplemented annually by new establishments identified by the Social Security Administration. A subsample of these new establishments is added annually to the pollution abatement survey sample.

The sample selection of the pollution abatement survey panel is a two-stage operation. The selection of the ASM panel represents the first stage, and the selection of the pollution abatement survey panel from the ASM is the second stage. Probabilities of selection were assigned proportionate to the ASM weighted value of shipments which satisfied predetermined reliability constraints. These reliability constraints were subject to the limitation that the overall sample size not exceed 17,000 establishments. Selection is within four-digit industries. When selected, an establishment's subsampling weight is the inverse of its probability of selection. The product of this weight and its ASM weight represents the final survey weight for the establishment. Subsampling probabilities were adjusted prior to sampling if this composite weight exceeded 500.

Revisions

Statistics for previous years may be revised, primarily as the result of corrected data from respondents.

Limitations of the Data

Sampling Variation. The particular sample selected for this survey is one of a large number of similar probability samples of the same size that could have been selected by chance using the same sample design.

Each of the possible samples would yield somewhat different sets of results. The sampling errors—the differences between the estimate obtained and the results theoretically obtainable from a comparable complete canvass of the same target universe—are unknown. Guides to the potential size of the sampling errors are provided by the estimated relative standard errors of the average. Relative standard errors tend to be somewhat higher for detailed figures than for larger aggregates.

In conjunction with its associated estimates, the relative standard error (computed as the estimated standard error of estimate divided by the value of the estimate) may be used to define confidence interval ranges that could be expected to include comparable complete coverage value for specified percentages of all possible samples. The complete coverage value would be included in the range:

1. From one standard error below to one standard error above the derived estimate for about two-thirds of all samples.
2. From two standard errors below to two standard errors above the derived estimate for about 19 out of 20 of all possible samples.
3. From three standard errors below to three standard errors above the derived estimate for nearly all samples.

An inference that the comparable complete coverage results would be within the indicated ranges would be correct in approximately the relative frequencies shown. Those proportions, therefore, may be interpreted as defining the confidence that the estimates shown would differ from complete coverage results by as much as one, two, or three standard errors, respectively.

For example, if an estimated total is shown as \$20.0 million with an associated relative standard error of 2 percent, the standard error is \$.4 million (2 percent of \$20.0 million). Then there is approximately 67 percent confidence that the interval \$19.6 to \$20.4 million includes the complete coverage total, about 95 percent confidence that the interval \$19.2 to \$20.8 million includes the complete coverage total, and almost certain confidence that the interval \$18.8 to \$21.2 million includes the complete coverage total.

The estimated absolute standard errors of the ratio of year-to-year change are also presented for these same key items. These estimated errors are derived from the variances of the individual yearly estimates, and thus are overestimates since the correlations from year-to-year estimates are not accounted for. Since this year-to-year change is itself a percentage measure, the absolute standard error of this measure is displayed rather than the relative standard error to avoid confusion.

For example, if an estimated total for 1993 is \$22.0 million with an associated relative standard error of 2 percent, and if an estimated total for 1992 is \$20.0 million with an associated relative standard error of 3 percent, the implied change is 10 percent, and the absolute standard error of year-to-year change is 3 percent on the 10 percent.

Stratum Variation. To maintain a minimal sample, the universe is divided into three strata. Stratum 1 contains four-digit industries with historically high pollution abatement expenditures. The sample selected to represent stratum 1 is designed to yield estimates for each four-digit industry in the stratum with a specified level of expected reliability.

Stratum 3 contains four-digit industries with little or no historic pollution expenditures. A small sample represents this stratum. Because of the minimal expenditures, estimates for the four-digit industries are not published at that level. The estimates are included in the two- and three-digit level data.

Stratum 2 contains all four-digit industries not in stratum 1 or 3. The sample selected to represent stratum 2 is designed to yield estimates for all three-digit manufacturing industries with a specified level of expected reliability.

Plants in stratum 2 and especially stratum 3 tend to have high weights resulting from their lower probabilities of selection. Thus, more data variability is seen in industries with historically low pollution abatement. The confidence interval ranges reflect this observation. For example, in table 11, for industry 2013, the pollution abatement operating cost is \$34.1 million with a relative standard error of 22 percent. The standard error is \$7.5 million. There is 67 percent confidence that the interval \$26.6 to \$41.6 million includes the complete coverage total; about 95 percent confidence that the interval \$19.1 to \$49.1 million includes the complete coverage total; and almost certain confidence that the interval \$11.6 to \$56.6 million includes the complete coverage total.

Data variability decreases at higher tabulations of the data. The three-digit industry group 201 consists of the four-digit industry 2013, used in the example above, and industries 2011 and 2015. Continuing with the example, the relative standard error for the four-digit industry 2013 is 22 percent. At the three-digit level, the relative standard error drops to 6 percent.

Response Limitations. There are limitations resulting from the accuracy of survey respondents' reporting and constraints on surveying capabilities. Specific response limitations are:

1. **Production process enhancements (PPE) capital expenditures.** The survey respondent is instructed to report "the pollution abatement portion of the installed cost of enhancement projects intended for environmental protection. Estimate the pollution abatement portion as the extra cost of pollution abatement features in structures and equipment (i.e., your actual spending less what you would have spent without the pollution abatement features built in)." Telephone conversations and interviews with survey respondents indicate that estimating such an incremental cost is difficult in many instances. The net effect of this reporting problem is not known; thus, the data user should consider this limitation when interpreting the PPE data.
2. **Cost offsets.** This item attempts to measure how much of pollution abatement costs are recovered through reuse or sale of recovered materials and energy. Part of the instructions state: "Cost offsets must be related to production and for environmental

protection." This qualification makes it imperative that the data preparer be aware of the original motivation of the decision to minimize waste or recover energy in order to adequately complete the form. The Bureau of the Census believes that this information is not always known.

3. **Operating costs for pollution abatement.** The survey respondent is asked to provide the following data separately: depreciation; salaries and wages; fuel and electricity; contract work/services; and materials, leasing, and other costs. In many cases, interviews with survey respondents have revealed that, with the exception of depreciation, book records are not kept for each category. Thus, these data must be estimated from other information.
4. **Nonmedia costs and expenditures.** Caution should be used in interpreting site cleanup data. Much of media, nonmedia, and other pollution abatement expenditures can be linked to laws and regulations. The expenditures are predictable, and industry estimates are reliable within the standard errors. Many site cleanup expenditures are related to laws and, therefore, are predictable by industry. However, some site cleanup incidents are the result of accidents. This makes the data more volatile than the media, underground storage tanks, and other pollution abatement expenditures data which are generally relatable to existing and pending legislation. Note that standard errors are given only for key measures, not for specific types of pollution abatement. In addition, there are abandoned sites under site cleanup, but since no plants are located on or specifically associated with the sites, the expenses are not covered by this survey.
5. **Air capital expenditures for major group 29.** The air capital expenditures for Major Group 29, Petroleum and Coal Products, include expenditures to meet the clean fuel requirements of the Clean Air Act. Expenditures for equipment and structures yielding cleaner fuel generally also achieve pollution abatement in the production process. Thus, it is generally not possible to separate clean fuel expenditures from pollution abatement expenditures for the production process.
6. **Capital expenditures by small companies.** Small companies, generally those with 50 employees or fewer, tend to report capital expenditure projects at the project's completion. Instead of reporting costs over time as the costs were incurred, a project total appears in 1 year. Since small companies tend to have high weights, the weighted project total sometimes appears as a notable increase in the data for 1 year. No attempt is made to adjust the data.

Operational Errors. In addition to the response limitations, the estimates are subject to various operational errors; e.g., errors of collection, reporting, and transcription. The operational errors would also occur if a complete

canvass were conducted under the same conditions used for this survey. Explicit measures of the effects of the operational errors generally are not available. However, it is believed that most of the important operational errors were detected and corrected in the course of the Census Bureau's review of the data for reasonability and consistency.

NONMANUFACTURING

Table 14 and tables 15a through 15d present nonmanufacturing pollution abatement capital expenditures data. The data are collected on the Form PA-2, Plant and Equipment Survey: Supplement for Pollution Abatement. The Bureau of the Census has conducted the survey annually since 1988. Prior to 1988, the Bureau of Economic Analysis conducted the survey.

Summary of Survey Results

In 1993, pollution abatement capital expenditures for the media, nonmedia, and other by nonmanufacturing companies amounted to \$504 million for mining, \$4,445 million for petroleum, and \$4,200 million for electric utilities. Pollution abatement capital expenditures for the media air, water, and solid/contained waste amounted to \$389 million for mining, \$3,964 million for petroleum, and \$4,032 million for electric utilities. This represented a 22 percent increase, a 2 percent increase, and a 40 percent increase, respectively, compared with the prior year. Air capital expenditures showed gains of 7 percent for petroleum, 23 percent for electric utilities, and 50 percent for mining. Water capital expenditures showed increases of 11 percent for mining and 9 percent for electric utilities, and a decrease of 19 percent for petroleum. Solid/contained waste capital expenditures rose 71 percent for mining and 30 percent for electric utilities and decreased 16 percent for petroleum. Nonmedia and other capital expenditures rose 31 percent for mining and 11 percent for electric utilities and decreased 2 percent for petroleum.

Information in the Tables

Historic Table. Table 14 shows pollution abatement capital expenditures for the media air, water, and solid/contained waste totals and for total nonmedia and other by industry. Table 14 also shows new plant and equipment data by industry.

Detail Tables. Detail for table 14 is shown in tables 15a through 15d. Within tables 15a through 15c, the media capital expenditures are separated on the basis of abatement technique and by hazardous and nonhazardous expenditures. For air expenditures (table 15a), data also are shown as a group for the major types of air pollutants:

particulates, sulfur oxides, nitrogen oxides, carbon monoxide, hydrocarbons and volatile organic compounds, and lead. If an air expenditure is not for one of the major types of air pollutants and is not hazardous, it is classified as other. In table 15d, nonmedia and other abatement expenditures are shown for underground storage tanks, site cleanup, noise pollution, radiation, multimedia, or n.e.c. types of pollutants.

Changes in Data Collection Affecting Historic Comparisons

The 1992 and 1993 PA-2 survey forms differ from previous years. These changes may affect the year-to-year comparisons of some of the results.

Some of the general terminology and definitions are changed or new:

Pollution abatement is redefined as ". . . for the purpose of reducing, eliminating, or disposing of unwanted emissions or wastes that are created by the production process and harmful to the environment or the removal of pollution created by prior-years production. For this survey, only expenditures with the primary purpose of protecting the environment are included." The revised pollution abatement definition replaces a reference to "pollutants" in prior definitions with "unwanted emissions or wastes." It expands the prior definition by adding the qualification "harmful to the environment" to the qualification "created by the production process." The definition then goes a step further and specifies that expenditures qualify for reporting only if the *primary purpose* is environmental protection. It adds the reporting of expenditures to remove pollution created by production in prior years.

The techniques for pollution abatement are clarified. "Prevention" is changed to "source reduction" and "waste minimization." Definitions are provided on the form for these. "Collection/disposal" and "recycling" are now defined.

Instructions and the type of data collected for capital expenditures for the media are changed:

Capital expenditures now include a measure of "end of line" and "production process enhancements" (formerly changes-in-production process) for solid/contained waste as well as for air and water. New "special instructions" explain how to report production process enhancement expenditures if it is not feasible to report only the portion intended for environmental protection.

"Percent hazardous" is now collected for air and water pollution abatement capital expenditures as well as for solid/contained waste.

Type-of-pollutants data are now collected for air pollution capital expenditures. Air pollutants are collected by three categories:

1. Hazardous
2. Particulates, sulfur oxides, nitrogen oxides, carbon monoxide, hydrocarbons and volatile organic compounds, and lead
3. Other nonhazardous air pollutants

The instructions clarify that "research and development" is *not* reportable.

Though not specified in the prior-year instructions, expenditures for testing and monitoring equipment were excluded from surveys prior to 1992. These expenditures are reportable for 1992 and 1993.

The 1992 report showed pollution abatement expenditures for "nonmedia" and "other" for the first time. The "nonmedia" include data for underground storage tanks and site cleanup. "Other" expenditures are for noise abatement, radiation abatement, multimedia, and not elsewhere classified. "Multimedia" expenditures are for the abatement of pollutants that cross media.

Scope

The survey covers companies classified in mining, petroleum, and electric utility industries and includes all operations of the company. A company's capital expenditures are assigned to a single industry in accordance with the standard industrial classification (SIC) of the company's principal product or service. For mining, the survey covers the four SIC Major Groups: 10, Metal Mining; 12, Coal Mining; 13, Oil and Gas Extraction; and 14, Nonmetallic Minerals, Except Fuels. For petroleum, the survey covers SIC Major Group 29, Petroleum and Coal Products. The survey of pollution abatement expenditures in nonmanufacturing also covers SIC major group 29 used in the manufacturing survey, but the data differ. The manufacturing survey (MA-200) collects data at the plant level while the nonmanufacturing survey (PA-2) collects data at the company level. The manufacturing data presented for petroleum in tables 1 and 13b represent only the refining operations of the petroleum companies. The nonmanufacturing data presented in tables 14 through 15d also may include the extraction and distribution network of a company. For electric utilities, the survey covers SIC Industry Groups 491, Electric Services; and 493, Combination Utility Services, with the exception of Rural Electric Administration utilities.

Methodology

The total new plant and equipment expenditures shown in table 14 are estimates from the Plant and Equipment Expenditures Survey (P&E) conducted by the Bureau o

the Census. See the U.S. Department of Commerce News, Wednesday, April 10, 1991, CB91-125, PESVY(90)-4 for a description of the P&E's coverage and methodology. The same mail panel is used for the P&E and its pollution abatement supplement, the PA-2. Spending ratios derived from the data collected on the PA-2 are applied to the P&E estimates to yield the total new pollution abatement capital expenditures estimates.

Limitations of the Data

The data are subject to various response and operational errors; e.g., errors of collection, reporting, and transcription. However, it is believed that most of the important operational errors were detected and corrected in the course of the Census Bureau's review of the data for reasonability and consistency.

SELECTED INDUSTRIAL AIR POLLUTION CONTROL EQUIPMENT

Table 16 presents Selected Industrial Air Pollution Control Equipment: 1989 to 1993. These data are collected by the Bureau of the Census annually on the Current Industrial Reports Form MA35J. This information is provided for reference. For more detail, see the MA35J annual publication.

Scope

This survey covers firms engaged in the manufacture of selected industrial air pollution control equipment.

Methodology

The statistics in table 16 were collected by mail on Form MA35J. The survey panel includes all known manufacturers of the selected products specifically designed for use in air pollution control, approximately 100 companies.

Revisions

Statistics for previous years may be revised, primarily as the result of corrected data from respondents.

Limitations of the Data

The data are subject to various response and operational errors; e.g., errors of collection, reporting, and transcription. However, it is believed that most of the significant errors are identified by the computer edit and corrected in the course of the Census Bureau's review of the data for reasonableness and consistency.

QUESTIONS CONCERNING THIS REPORT

Please direct questions concerning data in this report to the Bureau of the Census, Manufacturing and Construction Division, Federal Office Building 4, Room 2105, Washington, DC 20233, or call the Environment, Technology, and Innovation Branch on 301-763-1755.

TERMINOLOGY AND ABBREVIATIONS

For an explanation of the terms used in this report, see the appendix for reproductions of the report forms MA-200 and PA-2, including instructions.

The following abbreviations and symbols appear frequently in the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual companies.
(Z)	Less than half the unit shown.
(X)	Not applicable.
(NA)	Not available.
EOL	End of line.
n.e.c.	Not elsewhere classified.
PACE	Pollution abatement capital expenditures.
PAOC	Pollution abatement operating costs.
PPE	Production process enhancements.
r	Revised by 5 percent or more from previously published figures.

Table 7. Operating Costs and Cost Offsets by Industries for All Media: 1993—Con.

[Million dollars. Totals may not agree with detail because of independent rounding. Statistics in this table cover manufacturing establishments with 20 or more employees. No industries are shown where PAOC is less than \$1.0 million. See introductory text for a description of survey coverage and for the meaning of abbreviations and symbols.]

OMB No. 0607-0176:
Approval Expires 09/30/95

UNITED STATES DEPARTMENT OF COMMERCE
Bureau of the Census
Washington, DC 20233-0001

OFFICE OF THE DIRECTOR

FROM THE ACTING DIRECTOR
BUREAU OF THE CENSUS

Industrial firms are devoting a significant share of their resources for pollution abatement. Consequently, it is important that accurate and timely statistics be available on a broad national basis so that business, Government, and the general public can better evaluate the economic implications of such costs. The annual "Survey of Pollution Abatement Costs and Expenditures" provides this information.

We require this report only for plant(s) for which you received an addressed form. Please read the general instructions carefully, particularly if more than one establishment of your company used the same pollution abatement facilities. If actual records are not available, carefully prepared estimates are acceptable.

The law (Title 13, United States Code, Sections 182, 224, and 225) requires response to this inquiry. By Section 9 of the same law, your report to the Census Bureau is confidential. Only sworn Census Bureau employees will see the information reported and will use it only for statistical purposes. The law also provides that copies retained in your files are immune from legal process.

Your cooperation in returning the completed form by **March 15** will help to make possible the timely release of the survey results. If you need additional time to complete the report or need additional forms, call (812) 288-3331. If you have any questions, call the Special Surveys Branch of our Industry Division on (301) 763-1755. Your Census Bureau appreciates your help.

Sincerely,

A handwritten signature in black ink, appearing to read "Harry A. Scarr".

HARRY A. SCARR

**1993
SURVEY OF POLLUTION ABATEMENT
COSTS AND EXPENDITURES**

PLEASE COMPLETE THIS WORKBOOK. COPY THE
ANSWERS TO THE ENCLOSED ANSWER SHEET.
RETURN ONLY THE ANSWER SHEET.

SUBJECT and PURPOSE

This annual survey collects new capital expenditures and annual operating expenses for pollution abatement in manufacturing. It also covers cost offsets for reclaiming valuable materials or energy as a result of pollution abatement efforts.

Pollution abatement is for the purpose of reducing, eliminating, or disposing of unwanted emissions or wastes that are created by the production process and harmful to the environment or the removal of pollution created by prior years production. For this survey, only expenditures with the primary purpose of protecting the environment are included. This survey does not collect expenditures intended to meet worker safety and health requirements. It also does not include expenditures that abate pollution when the primary purpose is to increase profits or cut costs, and the environmental protection is a side benefit.

The **statistics from this survey** are mainly used by the Bureau of Economic Analysis to incorporate pollution abatement expenditures into the national income and product accounts and by the Environmental Protection Agency to monitor the economic impact of environmental programs. Other data users include: other Federal agencies, state and local governments, trade associations, manufacturers, marketing and research companies, universities, financial institutions, and environmental reporters.

AUTHORITY and CONFIDENTIALITY

Response to this inquiry is **required by law** (Title 13, U.S. Code). By Section 9, of Title 13, U.S. Code, your report to the Census Bureau is **confidential**. It may be seen only by sworn Census Bureau employees and may be used only for statistical purposes. The data can not be used for regulation or enforcement. Copies of your report retained in your files are **immune from legal process**.

HOW TO REPORT

This report is required only for the establishment located at the address named in the address box on the answer sheet. **DO NOT COMBINE** with other establishments in your company even though operations may jointly use the same pollution abatement facilities. When this occurs, apportion the costs and expenditures according to the rate of pollution abatement equipment utilization or the relative amounts of pollutants produced.

All respondents should complete Item 1, **Operational Status**. Review Section B on page 6, **Screening for Pollution Abatement Costs and Expenditures**. Complete Item 2, **Total Pollution Abatement Costs and Expenditures**, and follow Item 2 instructions.

Answer all questions. If you can not answer a question from your plant records, please estimate the answer carefully. In some cases, identification of pollution abatement expenditures may require the joint efforts of your establishment's financial and engineering staff. Report all value figures in thousands of dollars. Report data for the calendar year. If calendar year book figures are not available except at considerable cost, reasonable estimates are acceptable. If your fiscal year ends between October 31 and February 28, fiscal year figures are acceptable.

This booklet contains general definitions and specific instructions for each item. Each item's instructions include a guide listing examples of expenditures. In most cases these lists will provide sufficient information for completing this survey form.

A-4 APPENDIX A

For further details or definitions, see the following acts:

Clean Air Act and Amendments
 Clean Water Act and Amendments
 Resource Conservation and Recovery Act and Amendments
 Pollution Prevention Act of 1990
 Comprehensive Environmental Responses, Compensation, and Liability Act
 Superfund Amendments and Reauthorization Act
 Noise Pollution Control Act

For the most recent amendments to these acts write:

U.S. House of Representatives

 Ford Building, Room B18
 Washington, DC 20515-6622

This survey is directed to manufacturing operations. The information requested supplements the data collected in the annual survey of manufactures. If you think that you are **not a manufacturing operation**, call our analysts at (301) 763-1755 for instructions. **NOTE:** Printing and publishing operations, logging, machine shops, and boat repair are included in manufacturing.

If you have **questions** or **suggestions** regarding this report, please call the Special Surveys Branch on (301) 763-1755. Please refer to the Census Bureau file number (the 11-digit number above the plant name in the address box) when calling or in written correspondence.

DUE DATE

Complete the answer sheet and return it by **March 15** in the enclosed prepaid envelope to:

Bureau of the Census
 1201 East 10th Street
 Jeffersonville, IN 47132-0001

DO NOT RETURN THIS WORKBOOK.

If you need **additional time** to complete the report, or if you need a **duplicate workbook** or answer sheet, please call our Jeffersonville office at **(812) 288-3331**.

RESPONSE TIME

Public reporting burden for this collection of information is estimated to vary from 45 minutes to 35 hours per form (with an average of 2-1/2 hours), including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing this collection of information. Send **comments** regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Associate Director for Management Services, Paperwork Reduction Project (0607-0176), Room 2027, FB 3, Bureau of the Census, Washington, DC 20233-0001; and to the Office of Management and Budget, Paperwork Reduction Project (0607-0176), Washington, DC 20503.

ELECTRONIC REPORTING

For **information** concerning the possible use of reporting formats other than the form provided, such as computer tape or printouts, contact our Special Surveys Branch on (301) 763-1755.

PUBLICATION OF RESULTS OF THIS SURVEY

Industry estimates are tabulated and published in the Current Industrial Report, Pollution Abatement Costs and Expenditures, MA-200. Companies reporting in this survey may obtain a copy of this publication without charge by marking the check box on the answer sheet for a copy of the **MA-200 publication**. You also may request a copy without charge by writing to the Bureau of the Census, Industry Division, Federal Office Building 4, Room 2105, Washington, DC 20233-0001.

Save tax dollars by sending your response in on time.*

SECTION B – SCREENING FOR POLLUTION ABATEMENT COSTS AND EXPENDITURES

This survey collects the following types of expenditures for pollution abatement and environmental protection:

1. Capital expenditures for pollution abatement structures or equipment added to the production process, **and** for structures and equipment with built-in pollution abatement features to reduce generation of air pollutants, water pollutants, or solid/contained wastes.
2. Operating expenses for operating pollution abatement equipment; for removal or disposal of pollutants including **trash removal or sewage service**; for testing and monitoring of emissions or wastes; for pollution abatement audits, reports, studies, or operating procedures development.
3. Costs and expenditures for cleaning up contaminants from the site.
4. Costs and expenditures for other environmental protection such as expenditures to reduce noise pollution, radiation, or multimedia expenses.

Note: Some common pollution abatement expenses are for the removal of **garbage, paints, boxes, discarded cans, used oils, and inks** resulting from the production process.

► ITEM 2 – TOTAL POLLUTION ABATEMENT COSTS AND EXPENDITURES

*Check **all** appropriate boxes to indicate the types of pollution abatement expenditures at this location and proceed as instructed.*

No operating expenses or capital expenditures for pollution abatement. Your production process does not generate pollutants, or all your potential pollutants are recycled.

Costs either included in rent or not charged. All pollution abatement expenses were included in rent, taxes, lease agreement, **or** waste removal at no charge (such as a scavenger service)

Pollution abatement operating expenses and capital expenditures **each** were less than \$500 but greater than zero

Annual pollution abatement operating expenses exceeding \$500

Capital expenditures exceeding \$500 for pollution abatement structures or equipment, or for structures or equipment with built-in pollution abatement features

Costs and expenditures for underground storage tanks

Costs and expenditures exceeding \$500 for site cleanup

OTHER environmental protection costs and expenditures exceeding \$500

You have no pollution or do not need to report any. Check this box on the answer sheet. Complete **ITEM 13** of the answer sheet and return it.

Complete **Section D** starting on page 8

Complete **Section E** starting on page 11

Complete **Section F** starting on page 13

Complete **Section G** starting on page 14

Complete **Section H** starting on page 15

Read **Section C, General Definitions**, on page 7 first

SECTION C - GENERAL DEFINITIONS

MEDIA

Report expenditures by the media, **air, water, or solid/contained (land) waste**, that would be affected by the pollutants if the pollutants were not reduced, eliminated, or disposed of. See the hazardous versus nonhazardous pollutants section below for examples of the types of wastes affecting each media.

TECHNIQUES FOR POLLUTION ABATEMENT

Treatment refers to the wide variety of techniques used on wastes to cool, detoxify, decompose, and separate-to-store or ameliorate.

Collection/Disposal refers to the collection, storage, transport, processing, and disposal of solid waste by incineration, sanitary or other landfill methods, and disposing in authorized areas.

Waste minimization is any practice which prevents, reduces, eliminates, or recovers and reuses emissions or wastes so as to avoid treatment or collection/disposal. Waste minimization includes source reduction and recycling.

Source reduction is any practice which prevents or reduces the amount of emissions or waste generated for recycling, treatment, or collection/disposal. This can be accomplished by equipment/technology changes, process procedure modifications, product reformulation/redesign, raw material substitutions (including improved catalysts and reuse of waste or water), and improvements in housekeeping, maintenance, training, or inventory control.

Recycling is a method of waste management in which waste is recovered and reused for its material or energy values. The waste can be reused in the production process or sold to an outside party as material. We are including the burning of flammable wastes for energy recovery as recycling. Closed loop recovery systems are recycling.

HAZARDOUS VERSUS NONHAZARDOUS POLLUTANTS

Hazardous air pollutants are those regulated under Section 112 of the Clean Air Act. Examples include arsenic, benzene, beryllium, mercury, and vinyl chloride. **Nonhazardous air pollutants** examples typically include particulates, sulfur oxides, nitrogen oxides, carbon monoxide, hydrocarbons, volatile organic compounds (VOC), and lead. Hazardous particulates and VOCs should be reported as hazardous.

Hazardous water pollutants are toxic metals/toxic inorganic compounds, and toxic organic compounds as listed by the Clean Water Act. Examples of toxic metals and inorganic compounds include antimony, arsenic, beryllium, cadmium, chromium, copper, cyanide, lead, mercury, nickel, silver, thallium, and zinc. Examples of toxic organic compounds are benzene, chlorethane, toluene, and zylene. **Nonhazardous water pollutants** examples include conventional pollutants such as detergents and food wastes, and nonconventional pollutants.

Hazardous solid/contained wastes are listed under Subtitle C of the Resource Conservation and Recovery Act. Oils and inks are common hazardous contained liquid wastes. **Nonhazardous solid/contained waste** examples include boxes, nails, containers, sawdust, scrap metal, scrap wood, sewage sludge, dredged spoils, incinerator residue, and wrecked or discarded equipment.

SECTION D - ANNUAL OPERATING EXPENSES AND COST OFFSETS FOR POLLUTION ABATEMENT

GUIDE FOR ITEMS 3-5

The following list describes the types of expenses to report in this section. The list is intended to be a guide and is not complete.

Include operating expenses for:

- private contractor collection/disposal of waste created by the production process (Report in Item 3, line d - Contract Work.)
- sewage or solid/contained waste collection/disposal paid to Federal, State, or local governments (Report only in Item 5.)
- handling, treatment, or disposal of wastes created by the production process
- testing and monitoring of emissions or wastes
- operating and maintaining pollution abatement equipment
- fuel and power costs for operating pollution abatement equipment
- incremental costs for consumption of environmentally preferable materials and fuels
- conducting environmental studies for development or expansion
- parts for pollution abatement equipment replacement and repair
- leasing of pollution abatement equipment
- compliance and environmental auditing
- salaries and wages for time spent completing environmental reporting requirements
- developing pollution abatement operating procedures
- permits and costs incurred obtaining permits

Trash and hazardous material pick up by a private contractor are reported in Item 3, line d, solid/contained waste. Trash pick up by a government agency is reported in Item 5, line b.

Sewage costs paid to a private contractor are reported in Item 3, line d, water. Sewage costs paid to a government agency are reported in Item 5, line a.

Exclude operating expenses for:

- collection/disposal of office and cafeteria trash (If you can not separate from industrial, report the entire amount.)
- sanitary sewage (If you can not separate from industrial, report the entire amount.)
- health, safety, environmental aesthetics, or employee comfort (OSHA)
- research and development services
- manufacture of pollution abatement equipment
- taxes, fines, legal fees, superfund taxes and contributions, insurance
- interest for financing pollution abatement capital expenditures
- clean up of spills (Report in Item 10.)
- substituted materials in products to abate pollution either in the production process or from the product. Costs to reformulate products to eliminate or reduce pollution from the production process are reportable.
- abatement activities that are a normal operating procedure and would continue in the absence of pollution abatement legislation

► **ITEM 3 – OPERATING EXPENSES FOR POLLUTION ABATEMENT EXCEPT PAYMENTS TO GOVERNMENTS**

Report pollution abatement annual operating expenses by media and expense category for the survey year. If all operating expenses fall between \$500–\$1,000, round up to \$1,000, and report in the most applicable category. See Section C on page 7 for media definitions.

Depreciation – Report depreciation for all pollution abatement structures and equipment in place as of December 31 of the survey year.

Salary & Wages – Follow the definition of salary and wages used for calculating the withholding tax. Report the gross earnings. Exclude supplemental labor costs.

Materials – Report the delivered cost of materials, parts, and components that were used as operating supplies for pollution abatement, or used in repair or maintenance of pollution abatement capital assets.

Expense Category	Media		
	Air	Water	Solid/Contained Waste
a. Depreciation	\$, , ,000	\$, , ,000	\$, , ,000
b. Salaries & Wages	\$, , ,000	\$, , ,000	\$, , ,000
c. Fuel & Electricity	\$, , ,000	\$, , ,000	\$, , ,000
d. Contract Work/Services	\$, , ,000	\$, , ,000	\$, , ,000
e. Materials, Leasing, Miscellaneous	\$, , ,000	\$, , ,000	\$, , ,000
f. Total	\$, , ,000	\$, , ,000	\$, , ,000

► **ITEM 4 – OPERATING EXPENSES FOR HAZARDOUS POLLUTANTS**

Percent hazardous – Report percents of dollars reported in Item 3, line f which are for the abatement of hazardous pollutants. For example, if the expenses for the abatement of pollutants are intended to abate only hazardous pollutants, report 100% in the appropriate category below. Report zero (0) when no hazardous pollutants are abated. Estimate the percentage of expenditures directed to hazardous pollutants when both hazardous and nonhazardous pollutants are abated. See Section C on page 7 for hazardous pollutants definitions.

Percent Hazardous	Air	Water	Solid/ Contained Waste
	.0%	.0%	.0%

► **ITEM 5 – PAYMENTS TO GOVERNMENTS FOR POLLUTANT REMOVAL**

Payments to governments includes payments to Federal, State, county, or local governmental units for sewage services or solid/contained waste collection/disposal for the survey year.

Payments to governments for:	
a. Sewage Services	\$, , ,000
b. Solid/Contained Waste Collection/Disposal	\$, , ,000
c. Total	\$, , ,000

GUIDE FOR ITEM 6

Pollution abatement **cost offsets** (usually the value of recovered materials and energy) are pollution abatement operating expenses recovered as a result or an off-shoot of pollution abatement techniques. See Section C on page 7 for techniques definitions. There are conditions for which the techniques have cost offsets associated with them. Cost offsets must be related to production and for environmental protection. There must be a pollution abatement expense against which the cost offset is counted. *The offset may be greater than the expense.*

Conditions consistent with cost offsets:

- waste minimization (source reduction or recycling) for environmental protection
- energy recovery for environmental protection

Conditions not consistent with cost offsets:

- waste minimization (source reduction or recycling) for production efficiency or profit
- recycling of waste not related to production, such as cafeteria and office trash
- recycling that is your primary product, that is, you are a recycling plant
- savings due to better planning that avoided operating expenses
- tax credits

The list is intended to be a guide and is not complete.

Examples of cost offsets:

As an environmental protection alternative to used oil disposal, a printing plant has used machinery oil picked up by a hazardous waste collection and treatment service. The service charges a fee. The fee is reported in Item 3. The service returns the oil clean. Thus, the printer avoids buying new oil. The value of the oil is an offset to the service's fees.

A manufacturer purchases a cardboard baler. The capital expenditure is reported in Item 7. The costs of operating the baler are reported in Item 3. The manufacturer sells the cardboard to a recycler. The activity is not a potentially profit making venture; it is conducted for environmental protection. The revenues received from the recycler are cost offsets.

A manufacturer installs a closed loop recovery system in the production process so as to prevent the dumping of the chemicals into the water system. Since the closed loop recovery system recaptures and reuses the chemicals in the production process, it reduces expenses for chemicals. The pollution abatement portion of the capital expenditure pertaining to the closed loop recovery system is reported in Item 7. The operating expenses to maintain the system are reported in Item 3. The value of the recovered chemicals is reported as a cost offset.

Examples that are not cost offsets:

A copper smelter collects copper particulates in filters and sells the copper. The activity is viewed as necessary for profit goals.

Rejects and scraps are further processed at a bakery and are sold as animal feed for profit. This would be done even in the absence of environmental protection objectives.

A household cooking equipment manufacturer recaptures porcelain enamel particulates in air bags and reuses the material in the production process. The value of the particulates is substantial. The activity is viewed as necessary for profit goals.

► ITEM 6 – POLLUTION ABATEMENT COST OFFSETS

Note: Do not reduce the costs reported in Item 3 by the estimates here.

Air (a)	Water (b)	Solid/Contained Waste (c)	Total
\$, , ,000	\$, , ,000	\$, , ,000	\$, , ,000

SECTION E – NEW CAPITAL EXPENDITURES FOR ABATEMENT OF POLLUTANTS**GUIDE FOR ITEMS 7-8**

New capital expenditures for pollution abatement are all outlays during the survey year for pollution abatement structures and equipment that are chargeable to fixed asset accounts, and for which depreciation or amortization reserves (accounts) are maintained. Report only those capital outlays actually made during the year, not the final value of equipment put in place or the building completed during the year. If leasing arrangements meet Financial Accounting Standards Board criteria, please report the original cost or market value of the structure or equipment as a new capital expenditure. **Do not report total capital expenditures.** Total capital expenditures are reported on your annual survey of manufacturers (ASM). Report only the portions of capital expenditures that are for pollution abatement as defined by this survey.

Pollution abatement structures and equipment are of two types: **end-of-line** and **production process**.

End-of-line structures or equipment reduce pollutants after their generation. These are separately identifiable (retrofit) treatment facilities that are installed exclusively for the purpose of abating pollutant emissions or wastes. Report the entire end-of-line expenditure.

Production process enhancements (or replacements, additions, or alterations) reduce or eliminate the generation of pollutants by converting processes and equipment to enable waste minimization (source reduction or recycling), or to enable additional uses of water prior to discharge. Report the pollution abatement portion of the installed cost of enhancement projects intended for environmental protection. Estimate the pollution abatement portion as the extra cost of pollution abatement features in structures and equipment (i.e., your actual spending less what you would have spent without the pollution abatement features built-in.)

Special instructions: Estimating the pollution abatement portion (distinct from production efficiency, energy conservation, employee safety, etc.) of a process enhancement may not be feasible in all cases. For these cases, report in this manner: Do **not** include any of the project cost **unless** the primary purpose is environmental protection. If the primary purpose of the project is environmental protection, report the whole production process enhancement project expenditure. Indicate in the remarks section that this is the case. **Caution:** A project with the primary purpose of improving production efficiency may include pollution abatement features added to meet legal requirements. Since the primary purpose of such a project is still not environmental protection, do not report **any** of the production process enhancement.

Examples of Pollution Abatement Capital

Type	Media		
	Air (a)	Water (b)	Solid/Contained Waste (c)
End-of-Line Structures and Equipment	dust collectors, scrubbers, precipitators	trickling filters, settling ponds, clarifiers, spill containment dikes	cardboard balers, compactors, bins, improved containments for waste, incinerators
Production Process Enhancements	conversion to substitute fuels that generate fewer pollutants	conversion to a closed or partially closed loop system for pollution abatement	conversion to enable recycling scrap materials, converting piping for greater pollution prevention

The following list further describes the capital expenditures to report in this section. The list is intended to be a guide and is not complete.

Include new capital expenditures for:

- end-of-line structures or equipment: new, replacement, and/or expansion, intended for environmental protection
- the pollution abatement **portion of** production process enhancements intended for environmental protection
- pollution monitoring and testing equipment (Report as production process.)
- construction in progress intended for environmental protection including pollution abatement expenditures at a plant under construction intended to replace current plant
- waste storage facilities (Report tanks in Section F, Item 9.)

Exclude new capital expenditures for:

- pollution abatement end-of-line structures or equipment, or production process enhancements intended to maximize efficiency or profit
- research and development
- health, safety, environmental aesthetics or employee comfort (OSHA)
- recycling equipment if your primary product is recycling, that is, you are a recycling plant
- motor vehicles with pollution abatement devices, or refitting motor vehicles with pollution abatement devices
- production of pollution abatement equipment that is your primary product, that is, you are a pollution abatement equipment manufacturer
- projects undertaken exclusively for the purpose of insuring adequate water supply for production

► **ITEM 7 – NEW CAPITAL EXPENDITURES FOR POLLUTION ABATEMENT BY MEDIA**

For each media, report your pollution abatement end-of-line structures and equipment expenditures; the pollution abatement **portion** of your spending for production process enhancements; and the total of your end-of-line and your production process responses. Report the percentage of each total by media, except air, which is directed to hazardous pollutants. (Item 8 asks for the percentage for air.) Report for the survey year.

Exclude tanks from ITEM 7. Report capital expenditures for installation of safeguards or replacement of inferior underground storage tank systems in SECTION F, ITEM 9. Capital expenditures for other tank systems are not collected on this survey.

Type	Media		
	Air (a)	Water (b)	Solid/Contained Waste (c)
End-of-Line	\$, , ,000	\$, , ,000	\$, , ,000
Production Process (pollution abatement portion)	\$, , ,000	\$, , ,000	\$, , ,000
Total by Media	\$, , ,000	\$, , ,000	\$, , ,000
Percent Hazardous	See Item 8.	.0%	.0%

► ITEM 8 - TYPE OF AIR POLLUTANTS

Report the percentage of new capital expenditures for air pollution abatement from Item 7 by the type of pollutant the structure or equipment will abate. For example, if expenditures are intended to abate hazardous air pollutants and sulfur oxides equally, report 50% on the hazardous air pollutant line and 50% on the particulates, sulfur oxides etc. line.

a. Hazardous air pollutants	.0%	
b. Particulates, sulfur oxides, nitrogen oxides, carbon monoxide, hydrocarbons – volatile organic compounds, and lead	.0%	
c. Other nonhazardous air pollutants	.0%	
d. Total	100	.0%

SECTION F - COSTS AND EXPENDITURES FOR UNDERGROUND STORAGE TANKS

► ITEM 9 - COSTS AND EXPENDITURES FOR UNDERGROUND STORAGE TANKS

GUIDE FOR ITEM 9

The following list describes the types of expenditures to report in this section. The list is intended to be a guide and is not complete.

Include costs and expenditures for:

- installation of safeguards for existing underground tanks
- replacement of inferior or leaking underground storage tanks
- removal of inferior or leaking underground storage tanks
- monitoring underground storage tanks

Report costs and expenditures for ***underground storage tanks*** for the survey year.

Annual operating expenses for removal of underground storage tanks	\$, ,000
New capital expenditures for underground storage tanks	\$, ,000

SECTION G - COSTS AND EXPENDITURES FOR SITE CLEANUP

GUIDE FOR ITEM 10

Site cleanup is the abatement of pollutant contamination from leaks, spills, past production processes, or at a former disposal site (Superfund). The pollution must be on the site of the establishment named on this survey form or from your plant's production process. Site cleanup is not reported by media. The following list describes the types of expenditures to report in this section. The list is intended to be a guide and is not complete.

Include costs and expenditures for:

- privately-paid site cleanup
- testing and monitoring
- compliance and environmental auditing
- environmental studies
- groundwater contamination cleanup
- reclamation for pollution abatement

Exclude costs and expenditures for:

- government-paid site cleanup
- taxes, fines, permits, legal fees such as for settling liability and other issues, superfund taxes and contributions
- interest for financing pollution abatement capital expenditures
- reclamation to enhance property values or for aesthetics

► ITEM 10 - COSTS AND EXPENDITURES FOR SITE CLEANUP

Report costs and expenditures for site cleanup for the survey year.

Annual operating expenses for site cleanup	\$, ,000
New capital expenditures for site cleanup	\$, ,000

SECTION H - COSTS AND EXPENDITURES FOR ABATEMENT OF OTHER POLLUTANTS**GUIDE FOR ITEMS 11-12**

OTHER pollution abatement costs and expenditures cover pollution emissions or wastes that can not be reasonably allocated by media. Media are defined in Section C on page 7.

Include costs and expenditures for:

- noise pollution control that would otherwise disturb the surrounding community
- protection against radiation that would otherwise reach the surrounding environment
- multimedia expenses, that is, expenses that can not be allocated to one particular media (such as administrative costs for an on-site environmental office or lab)

► ITEM 11 - COST AND EXPENDITURES FOR OTHER POLLUTANTS

Report costs and expenditures for OTHER pollutants for the survey year.

Annual operating expenses for OTHER pollution abatement	\$, ,000
New capital expenditures for OTHER pollution abatement	\$, ,000

► ITEM 12 - TYPE OF OTHER POLLUTANTS

Check the type(s) of pollutants abated by the expenditures reported in ITEM 11.

- Noise pollution that would otherwise disturb the surrounding community
- Radiation that would otherwise reach the surrounding environment
- Multimedia expenses
- Other pollutants within the scope of this survey but not reported elsewhere on this form.
Please specify in remarks.

SECTION I - CERTIFICATION**► ITEM 13 - CERTIFICATION** – Certify the answer sheet. For this workbook, record the name of the person who can clarify the data reported in this year's survey.

Name of person to contact regarding this report (Print or type)	Telephone		
	Area code	Number	Extension

ITEM 1 – OPERATIONAL STATUS

Check **one box** which best describes this establishment on December 31 **of the survey year**.

- 011** **IN OPERATION** Indicate month purchased or started up if applicable in 1992: —> Month

012 **TEMPORARILY IDLE**

013 **PERMANENTLY CEASED OPERATIONS, NOT YET SOLD OR DISMANTLED**

014 **DISMANTLED OR QUIT LEASE**

015 **SOLD**

ITEM 2 - TOTAL POLLUTION ABATEMENT EXPENDITURES

- 211 No operating expenses or capital expenditures for pollution abatement. Your production process does not generate pollutants, or all your potential pollutants are recycled.
- 212 Costs either included in rent or not charged. All pollution abatement expenses were included in rent, taxes, lease agreement, **or** waste removal at no charge (such as a scavenger service)
- 213 Pollution abatement operating expenses and capital expenditures **each** were less than \$500 but greater than zero
- 214 Annual pollution abatement operating expenses exceeding \$500
- 215 Capital expenditures exceeding \$500 for pollution abatement structures or equipment, or for structures or equipment with built-in pollution abatement features
- 216 Costs and expenditures exceeding \$500 for underground storage tanks
- 217 Costs and expenditures exceeding \$500 for site cleanup
- 218 OTHER environmental protection costs and expenditures exceeding \$500

You have no pollution or do not need to report any. Complete **ITEM 13** and return the answer sheet.

ITEM 3 - OPERATING EXPENSES FOR POLLUTION ABATEMENT EXCEPT PAYMENTS TO GOVERNMENT

Expense Category	Media		
	Air	Water	Solid/Contained Waste
a. Depreciation	301 \$, ,000	311 \$, ,000	321 \$, ,000
b. Salaries & Wages	302 \$, ,000	312 \$, ,000	322 \$, ,000
c. Fuel & Electricity	303 \$, ,000	313 \$, ,000	323 \$, ,000
d. Contract Work/Services	304 \$, ,000	314 \$, ,000	324 \$, ,000
e. Materials, Leasing, Miscellaneous	305 \$, ,000	315 \$, ,000	325 \$, ,000
f. Total	306 \$, ,000	316 \$, ,000	326 \$, ,000

ITEM 4 - OPERATING EXPENSES FOR HAZARDOUS POLLUTANTS

Percent Hazardous	Air	Water	Solid/ Contained Waste
	401 .0%	411 .0%	421 .0%

ITEM 5 – PAYMENTS TO GOVERNMENTS FOR POLLUTION REMOVAL

Payments to governments for:	
a. Sewage Services	501 \$, ,000
b. Solid/Contained Waste Collection/Disposal	502 \$, ,000
c. Total	503 \$, ,000

ITEM 6 – POLLUTION ABATEMENT COST OFFSETS

Air (a)	Water (b)	Solid/Contained Waste (c)	Total
601 \$, ,000	611 \$, ,000	621 \$, ,000	631 \$, ,000

ITEM 7 – NEW CAPITAL EXPENDITURES FOR POLLUTION ABATEMENT BY MEDIA

Type	Media		
	Air (a)	Water (b)	Solid/Contained Waste (c)
End-of-Line	701 \$, ,000	711 \$, ,000	721 \$, ,000
Production Process (pollution abatement portion)	702 \$, ,000	712 \$, ,000	722 \$, ,000
Total by Media	703 \$, ,000	713 \$, ,000	723 \$, ,000
Percent Hazardous	See Item 8.	.0%	.0%

ITEM 8 – TYPE OF AIR POLLUTANTS

a. Hazardous air pollutants	801 .0%
b. Particulates, sulfur oxides, nitrogen oxides, carbon monoxide, hydrocarbons – volatile organic compounds, and lead	802 .0%
c. Other nonhazardous air pollutants	803 .0%
d. Total	100 .0%

UNITED STATES DEPARTMENT OF COMMERCIAL

Bureau of the Census
Washington, DC 20233-0001

OFFICE OF THE DIRECTOR

FROM THE ACTING DIRECTOR
BUREAU OF THE CENSUS

Industrial firms are devoting a significant share of their resources for pollution abatement. Consequently, it is important that accurate and timely statistics be available on a broad national basis so that business, Government, and the general public can better evaluate the economic implications of such costs. The annual "Plant and Equipment Survey Supplement for Pollution Abatement" provides this information.

This report covers the operations of the company identified in the address box. Please read the general instructions carefully. If actual records are not available, carefully prepared estimates are acceptable.

The law (Title 13, United States Code, Sections 182, 224, and 225) requires response to this inquiry. By Section 9 of the same law, your report to the Census Bureau is confidential. Only sworn Census Bureau employees will see the information reported and will use it only for statistical purposes. The law also provides that copies retained in your files are immune from legal process.

Your cooperation in returning the completed form by **March 15** will help to make possible the timely release of the survey results. If you need additional time to complete the report, require additional forms, or if you have any questions, call the Special Surveys Branch of our Industry Division on (301) 763-1755. Your Census Bureau appreciates your help.

Sincerely,

A handwritten signature in cursive ink, appearing to read "Harry A. Scarr".

HARRY A. SCARR

**1993
PLANT AND EQUIPMENT SURVEY
SUPPLEMENT FOR POLLUTION ABATEMENT**

PLEASE COMPLETE THIS WORKBOOK. COPY THE
ANSWERS TO THE ENCLOSED ANSWER SHEET.
RETURN ONLY THE ANSWER SHEET.

SUBJECT and PURPOSE

This annual survey collects total new domestic capital expenditures and pollution abatement new domestic capital expenditures.

Pollution abatement is for the purpose of reducing or eliminating, or disposing of unwanted emissions or wastes that are harmful to the environment or the removal of pollution created by prior years activities. For this survey, only expenditures which have the primary purpose of protecting the environment are included. This survey does not collect expenditures intended to meet worker safety and health requirements. It also does not include expenditures that abate pollution when the primary purpose is to increase profits or cut costs, and the environmental protection is a side benefit.

The **statistics from this survey** are mainly used by the Bureau of Economic Analysis in the environmental accounts that assess the effect of pollution control programs on investment and overall economic performance. Other data users include: other Federal agencies, state and local governments, trade associations, manufacturers, marketing and research companies, universities, financial institutions, and environmental reporters.

AUTHORITY and CONFIDENTIALITY

Response to this inquiry is **required by law** (Title 13, U.S. Code). By Section 9 of Title 13, U.S. Code, your report to the Census Bureau is **confidential**. It may be seen only by sworn Census Bureau employees and may be used only for statistical purposes. The data can not be used for regulation or enforcement. Copies of your report retained in your files are **immune from legal process**.

HOW TO REPORT

Report for all operations, including active and inactive sites, of the company named in the address box on the answer sheet. All respondents should complete Item 1, **Operational Status**. Review Section B on page 7, **Screening for Pollution Abatement New Capital Expenditures**. Complete Item 2, **Total New Capital Expenditures and Pollution Abatement New Capital Expenditures**, and follow Item 2 instructions.

This booklet contains general definitions and specific instructions for each item. Each item's instructions include a guide listing examples of expenditures. In most cases these lists will provide sufficient information for completing this survey form.

Answer all questions. If you can not answer a question from your company records, please estimate the answer carefully. In some cases, identification of pollution abatement new capital expenditures may require the joint efforts of your company's financial and engineering staff. Report all value figures in thousands of dollars. If the answer is zero, please report zero. Report data for the calendar year. If calendar year book figures are not available except at considerable cost, reasonable estimates are acceptable. If your fiscal year ends between October 31 and February 28, fiscal year figures are acceptable.

For further details or definitions, see the following acts:

Clean Air Act and Amendments

Clean Water Act and Amendments

Resource Conservation and Recovery Act and Amendments

Pollution Prevention Act of 1990

Comprehensive Environmental Responses, Compensation, and Liability Act

Superfund Amendments and Reauthorization Act

Noise Pollution Control Act

For the most recent amendments to these acts, write:

U.S. House of Representatives
Document Room
Ford Building, Room B18
Washington, DC 20515-6622

If you have **questions** or **suggestions** regarding this report, please call the Special Surveys Branch on (301) 763-1755.

Please refer to the identification number (the 10-digit number above the company name in the address box) in calls or correspondence.

DUE DATE

Complete the answer sheet and return it by **March 15** in the enclosed prepaid envelope to:

Bureau of the Census
Industry Division
FOB 4 Room 2105
Washington, DC 20233-0001

DO NOT RETURN THIS WORKBOOK.

If you need **additional time** to complete the report, or if you need a **duplicate workbook** or answer sheet, please call our Special Surveys Branch on (301) 763-1755.

RESPONSE TIME

Public reporting burden for this collection of information is estimated to vary from 45 minutes to 60 hours per form (with an average of 2-1/2 hours), including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Associate Director for Management Services, Paperwork Reduction Project (0607-0176), Room 2027, FB 3, Bureau of the Census, Washington, DC 20233-0001; and to the Office of Management and Budget, Paperwork Reduction Project (0607-0176), Washington, DC 20503.

ELECTRONIC REPORTING

For **information** concerning the possible use of reporting formats other than the form provided, such as computer tape or printouts, contact our Special Surveys Branch on (301) 763-1755.

PUBLICATION OF RESULTS OF THIS SURVEY

Industry estimates will be tabulated and published in the Current Industrial Report, Pollution Abatement Costs and Expenditures, MA-200. Companies reporting in this survey may mark the check box on the answer sheet to obtain a copy of the **MA-200 publication** without charge. You also may request a copy by writing to the Bureau of the Census, Industry Division, Federal Office Building 4, Room 2105, Washington, DC 20233-0001.

SPECIAL NOTE FOR THE PETROLEUM INDUSTRY

This survey covers all of your domestic petroleum operations including exploration, production, refining, marketing, and transportation. Not reportable are nonpetroleum operations such as coal, shale, or mineral mining, and chemical operations.

State _____ ZIP Code _____

CONTINUE WITH SECTION B ON PAGE 6.

*Failure to return the answer sheet will require the issuance of letters and duplicate forms.
Save tax dollars by sending your response in on time.*

SECTION B - SCREENING FOR POLLUTION ABATEMENT NEW DOMESTIC CAPITAL EXPENDITURES

This survey collects total new domestic capital expenditures and the following types of new capital expenditures for pollution abatement and environmental protection:

1. New domestic capital expenditures for pollution abatement structures or equipment added to the production process, *and* structures and equipment with built-in pollution abatement features to reduce generation of air pollutants, water pollutants, or solid/contained waste.

2. New domestic capital expenditures for cleaning up contaminants from the site.

3. New domestic capital expenditures for other environmental protection such as expenditures to reduce noise pollution, radiation, or multimedia expenditures.

► **ITEM 2 – TOTAL NEW DOMESTIC CAPITAL EXPENDITURES AND POLLUTION ABATEMENT NEW CAPITAL EXPENDITURES**

Check *all* appropriate boxes to indicate new domestic capital expenditures and the types of pollution abatement new domestic capital expenditures for this company and proceed as instructed.

SECTION C - GENERAL DEFINITIONS

MEDIA

Report expenditures by the media, **air, water, or solid/contained (land), waste**, that would be affected by the pollutants if the pollutants were not reduced, eliminated, or disposed of. See the hazardous versus nonhazardous pollutants section below for examples of the types of wastes affecting each media.

TECHNIQUES FOR POLLUTION ABATEMENT

Treatment refers to the wide variety of techniques used on wastes to cool, detoxify, decompose, and separate-to-store or ameliorate.

Collection/Disposal refers to the collection, storage, transport, processing, and disposal of solid waste by incineration, sanitary or other landfill methods, and disposing in authorized areas.

Waste minimization is any practice which prevents, reduces, eliminates, or recovers and reuses emissions or wastes so as to avoid treatment or collection/disposal. Waste minimization includes source reduction and recycling.

Source reduction is any practice which prevents or reduces the amount of emissions or waste generated for recycling, treatment, or collection/disposal. This can be accomplished by equipment/technology changes, process procedure modifications, product reformulation/redesign, raw material substitutions (including improved catalysts and reuse of waste or water), and improvements in housekeeping, maintenance, training, or inventory control.

Recycling is a method of waste management in which waste is recovered and reused for its material or energy values. The waste can be reused in the production process or sold to an outside party as material. We are including the burning of flammable wastes for energy recovery as recycling. Closed loop recovery systems are recycling.

HAZARDOUS VERSUS NONHAZARDOUS POLLUTANTS

Hazardous air pollutants are those regulated under Section 112 of the Clean Air Act. Examples include arsenic, benzene, beryllium, mercury, and vinyl chloride. **Nonhazardous air pollutants** examples typically include particulates, sulfur oxides, nitrogen oxides, carbon monoxide, hydrocarbons, volatile organic compounds (VOC), and lead. Hazardous particulates and VOCs should be reported as hazardous.

Hazardous water pollutants are toxic metals/toxic inorganic compounds, and toxic organic compounds as listed by the Clean Water Act. Examples of toxic metals and inorganic compounds include antimony, arsenic, beryllium, cadmium, chromium, copper, cyanide, lead, mercury, nickel, silver, thallium, and zinc. Examples of toxic organic compounds are benzene, chlorethane, toluene, and zylene. **Nonhazardous water pollutants** examples include conventional pollutants such as detergents and food, and nonconventional pollutants.

Hazardous solid/contained wastes are listed under Subtitle C of the Resource Conservation and Recovery Act. Oils and inks are common hazardous contained liquid wastes. **Nonhazardous solid/contained waste** examples include boxes, nails, containers, sawdust, scrap metal, scrap wood, sewage sludge, dredged spoils, incinerator residue, and wrecked or discarded equipment.

SECTION D - TOTAL NEW DOMESTIC CAPITAL EXPENDITURES

GUIDE FOR ITEM 3

New domestic capital expenditures are all outlays during the survey year for new structures and equipment that are chargeable to fixed asset accounts, and for which depreciation or amortization reserves (accounts) are maintained. Purchases of used structures and equipment are not new capital expenditures. Report only those capital outlays actually made during the year, not the final value of equipment put in place or the building completed during the year.

► ITEM 3 - TOTAL NEW DOMESTIC CAPITAL EXPENDITURES

This number is available on your PE-4 or PE-5 Plant and Equipment Survey.

Total new domestic capital expenditures including pollution abatement expenditures	\$, , , ,000
--	---------------

SECTION E - NEW DOMESTIC CAPITAL EXPENDITURES FOR ABATEMENT OF POLLUTANTS

GUIDE FOR ITEMS 4-6

Pollution abatement new capital expenditures for structures and equipment are of two types: ***end-of-line*** and ***production process***.

End-of-line structures or equipment reduce pollutants after their generation. These are separately identifiable (retrofit) treatment facilities that are installed exclusively for the purpose of abating pollutant emissions or wastes. Report the entire end-of-line expenditure.

Production process enhancements (or replacements, additions, or alterations) reduce or eliminate the generation of pollutants by converting processes and equipment to enable waste minimization (source reduction or recycling), or to enable additional uses of water prior to discharge. Report the pollution abatement portion of the installed cost of enhancement projects intended for environmental protection. Estimate the pollution abatement portion as the extra cost of pollution abatement features in structures and equipment (i.e., your actual spending less what you would have spent without the pollution abatement features built-in.)

Special instructions: Estimating the pollution abatement portion (distinct from production efficiency, energy conservation, employee safety, etc.) of a process enhancement may not be feasible in all cases. For these cases, report in this manner: Do ***not*** include any of the project cost ***unless*** the primary purpose is environmental protection. If the primary purpose of the project is environmental protection, report the whole production process enhancement project expenditure. Indicate in the remarks section that this is the case. ***Caution:*** A project with the primary purpose of improving production efficiency may include pollution abatement features added to meet legal requirements. Since the primary purpose of such a project is still not environmental protection, do not report ***any*** of the production process enhancement.

Examples of Pollution Abatement Capital

Type	Media		
	Air (a)	Water (b)	Solid/Contained Waste (c)
End-of-Line Structures and Equipment	dust collectors, scrubbers, precipitators	trickling filters, settling ponds, clarifiers, spill containment dikes	cardboard balers, compactors, bins, improved containments for waste, incinerators
Production Process Enhancements	conversion to substitute fuels that generate fewer pollutants	conversion to a closed or partially closed loop system for pollution abatement	conversion to enable recycling scrap materials, converting piping for greater pollution prevention

The following list further describes the capital expenditures to report in this section. The list is intended to be a guide and is not complete.

Include new capital expenditures for:

- end-of-line structures or equipment: new, replacement, and/or expansion, intended for environmental protection
- the pollution abatement **portion of** production process enhancements intended for environmental protection
- pollution monitoring and testing equipment (Report as production process.)
- construction in progress intended for environmental protection including pollution abatement expenditures at plants under construction and intended to replace current plants
- waste storage facilities (Report tanks in Item 6.)

Exclude new capital expenditures for:

- pollution abatement end-of-line structures or equipment, or production process enhancements intended to maximize efficiency or profit
- research and development
- health, safety, environmental aesthetics or employee comfort (OSHA)
- recycling equipment if a plant's primary product is recycling, that is, it is a recycling plant
- motor vehicles with pollution abatement devices or refitting motor vehicles with pollution abatement devices
- production of pollution abatement equipment that is a plant's primary product, that is, it is a pollution abatement equipment manufacturer
- projects undertaken exclusively for the purpose of insuring adequate water supply for production

► **ITEM 4 – NEW DOMESTIC CAPITAL EXPENDITURES FOR POLLUTION ABATEMENT BY MEDIA**

For each media, report your pollution abatement end-of-line structures and equipment expenditures; the pollution abatement **portion** of your spending for production process enhancements; and the total of your end-of-line and your production process enhancements. Report the percentage of each total by media, except air, which is directed to hazardous pollutants. (Item 5 asks for this percentage for air.) Report for the survey year.

Exclude tanks from ITEM 4. Report capital expenditures for installation of safeguards or replacement of inferior storage tank systems in ITEM 6. Capital expenditures for other tank systems are not collected on this survey.

Percent hazardous – Report the percent of total expenditures for water and solid/contained waste which is for the abatement of hazardous pollutants. For example, if the expenses for the abatement of pollutants are intended to abate only hazardous pollutants, report 100% in the appropriate category below. Report 0 when no hazardous pollutants are abated. Estimate the percentage of expenditures directed to hazardous pollutants when both hazardous and nonhazardous pollutants are abated. See Section C on page 7 for hazardous pollutants definitions.

Type	Media		
	Air (a)	Water (b)	Solid/Contained Waste (c)
End-of-Line	\$, , ,000	\$, , ,000	\$, , ,000
Production Process (pollution abatement portion)	\$, , ,000	\$, , ,000	\$, , ,000
Total by Media	\$, , ,000	\$, , ,000	\$, , ,000
Percent Hazardous	See Item 5.		.0%
			.0%

► ITEM 5 – TYPE OF AIR POLLUTANTS

Report the percentage of new capital expenditures for air pollution abatement from Item 4 by the type of pollutant the structure or equipment will abate. For example, if expenditures are intended to abate hazardous air pollutants and sulfur oxides equally, report 50% on the hazardous air pollutant line and 50% on the particulates, sulfur oxides etc. line.

a. Hazardous air pollutants	.0%	
b. Particulates, sulfur oxides, nitrogen oxides, carbon monoxide, hydrocarbons – volatile organic compounds, and lead	.0%	
c. Other nonhazardous air pollutants	.0%	
d. Total	100	.0%

► ITEM 6 – NEW DOMESTIC CAPITAL EXPENDITURES FOR UNDERGROUND STORAGE TANKS

Report new capital expenditures for **underground storage tanks** for the survey year.

Include new capital expenditures for:

- installation of safeguards for existing underground tanks
- replacement of inferior or leaking underground storage tanks

New domestic capital expenditures for underground storage tanks	\$, ,000
---	-----------

SECTION F – NEW DOMESTIC CAPITAL EXPENDITURES FOR SITE CLEANUP

GUIDE FOR ITEM 7

Site cleanup is the abatement of pollutant contamination from leaks, spills, past production processes, or at a former disposal site (Superfund). The pollution must be on the property of the company named on this survey form or from your company's production process. Site cleanup is not reported by media. The following list describes the types of expenditures to report in this section. The list is intended to be a guide and is not complete.

Include site cleanup new capital expenditures for:

- privately paid-for site cleanup capital
- testing and monitoring equipment
- reclamation for pollution abatement
- groundwater contamination cleanup capital

Exclude site cleanup new capital expenditures for:

- government paid-for site cleanup
- interest for financing pollution abatement capital expenditures
- reclamation to enhance property values or for aesthetics

► ITEM 7 – NEW DOMESTIC CAPITAL EXPENDITURES FOR SITE CLEANUP

Report new capital expenditures for site cleanup for the survey year.

New domestic capital expenditures for site cleanup	\$, ,000
--	-----------

SECTION G - NEW DOMESTIC CAPITAL EXPENDITURES FOR ABATEMENT OF OTHER POLLUTANTS

GUIDE FOR ITEMS 8-9

OTHER pollution abatement new capital expenditures cover pollution emissions or wastes that can not be reasonably allocated by media. Media are defined in Section C on page 7.

Include new capital expenditures for:

- noise pollution control that would otherwise disturb the surrounding community
- protection against radiation that would otherwise reach the surrounding environment
- multimedia expenditures, that is, expenses that can not be allocated to one particular media (such as capital expenditures for an environmental protection office or lab)

► **ITEM 8 - NEW DOMESTIC CAPITAL EXPENDITURES FOR OTHER POLLUTANTS**

Report new capital expenditures for other pollutants for the survey year.

New domestic capital expenditures for OTHER pollution abatement	\$,000
---	----	------

► **ITEM 9 - TYPE OF OTHER POLLUTANTS**

Check the type(s) of pollutants abated by the new capital expenditures reported in ITEM 8.

- Noise pollution that would otherwise disturb the surrounding community
- Radiation that would otherwise reach the surrounding environment
- Multimedia expenditures
- Other pollutants within the scope of this survey but not reported elsewhere on this form – *Please specify in remarks.*

SECTION H - CERTIFICATION

► **ITEM 10 - CERTIFICATION** – Certify the answer sheet. For this workbook, record the name of the person who can clarify the data reported in this year's survey.

Name of person to contact regarding this report (<i>Print or type</i>)	Telephone		
	Area code	Number	Extension
