

EMTS v5.2 Release Notes

1. Introduction

The Version 5.2 Release of the EPA Moderated Transaction System (EMTS) includes several important functionality enhancements. This version improves the functionality for ‘Fuels ABT Credit Remedial Generates’ and introduces the ‘Copy of Record’ (COR) and E-signature functionality for Fuels ABT credit transactions. Version 5.2 updates also improve management of facility information coming over in the nightly sync and correct an intermittent issue with file uploads.

2. Fuels ABT Credit Remedial Generates

The Fuels ABT credit remedial generate functionality has been extended to allow the company-specific authorization of credit generates for prior years in which a credit generate was never submitted. In addition, the company-specific authorization for remediating credit undergeneration has been improved so that it is no longer necessary for EPA to open a window for prior credit years.

3. Fuels ABT Copy of Record and E-Signature Functionality

EMTS version 5.2 now includes the creation of the COR for Fuels ABT credit transactions. Users will be able to specify whether they wish to generate a Fuels ABT COR on a daily, weekly, monthly, or quarterly basis. CDX CROMERR services are leveraged to provide users with the ability to sign a COR of the Fuels ABT credit transactions that have been submitted for their company. EMTS will also send out notification near the end of the compliance year to notify users of the deadline for signing their CORs. Note that the E-Signature functionality can only be used by users with a signed Electronic Service Agreement (ESA). Users without a signed ESA will continue to be able to use the previously existing features of EMTS.

4. Other updates

A change was made to improve the management of facilities when duplicate facility identifiers come across in the nightly sync. In addition, an authentication issue that occurs intermittently when users attempt to upload a file from the upload page within EMTS has been resolved.
