1. Network Overview

The Clean Air Status and Trends Network (CASTNET) is a long-term multipollutant monitoring network designed to report trends in regional air quality including ozone (O_3), oxidized and reduced forms of nitrogen, and sulfur. CASTNET fills an important role in the National Air Monitoring program by providing data in rural, disadvantaged communities that are often not monitored by the State and Local Air Monitoring Sites (SLAMS). CASTNET data are used to assess regional pollutant transport, validate and evaluate chemical transport models (e.g., CMAQ), and inform NAAQS reviews that consider human health and environmental impacts due to air pollution. CASTNET is managed collaboratively by the US Environmental Protection Agency – Clean Air Markets Division (EPA), the National Park Service – Air Resources Division (NPS), and the Bureau of Land Management – Wyoming State Office (BLM-WSO). In addition to EPA, NPS, and BLM-WSO, numerous other participants provide network support including tribes and other federal agencies, states, private landowners, and universities. The EPA contractor, WSP USA (WSP), operates the EPA-sponsored sites while the NPS and BLM-WSO contractor, Air Resource Specialists, Inc. (ARS), operates the remaining sites. A table detailing the management structure of CASTNET operations is provided in Figure 1. A summary of the entire CASTNET monitoring program is available online.[1]

Figure 1. CASTNET Project Organization

Eighty-four CASTNET sites measure weekly concentrations of sulfur dioxide (SO_2), sulfate (SO_4^{2-}), nitrate (NO_3^-), nitric acid (HNO_3), ammonium (NH_4^+), chloride (Cl^-) and base cations using a 3-stage filter pack (see Figure 2). Each site also reports hourly 9-meter temperature data to calculate local condition flow volumes. Eighty-one CASTNET sites collect ambient O_3 concentrations, reported as hourly averages, using a dual cell, ultraviolet photometric analyzer. Eighty of the eighty-one CASTNET O_3 monitoring analyzers meet the ambient monitoring and quality assurance requirements of Title 40, Code of Federal Regulations (CFR) Part 58 Appendices A, C, D and E. The ozone analyzer at Duke Forest, NC (DUK008) does not meet the siting criteria requirements from Appendix E of Part 58 because it has an inlet above the forest canopy at a height of 48 meters. Monitoring objectives, site types, detailed siting criteria, and other relevant parameters for each monitoring site may be found in Appendix A of this plan.

In addition to weekly filter pack and hourly temperature and O_3 measurements, forty-three CASTNET sites report other hourly meteorological parameters. CASTNET also measures trace-level NO/NOy, SO_2, and CO at select sites. CASTNET O_3 and trace-level gas monitors report hourly measurements throughout the entire year. Ozone analyzers are challenged nightly with known

[1] CASTNET monitoring program https://www3.epa.gov/castnet/docs/CASTNET-Factsheet-2021.pdf

concentrations delivered from the on-site transfer standard and trace gas analyzers are challenged every other night for fast-response troubleshooting.

To monitor consistency between the agencies, EPA operates a co-located site (ROM206) at the NPS CASTNET site located in Rocky Mountain National Park, Colorado (ROM406). Also, EPA operates a pair of co-located O_3 monitors (MCK131 and MCK231) in Mackville, KY with the co-located site identified as MCK231. Data from ROM206 and MCK231 are routinely analyzed to assess precision of the measurements and to identify biases that may arise. The CASTNET quality assurance (QA) program is independent of the program management. The QA program routinely assesses compliance with the CASTNET Quality Assurance Project Plan (QAPP)[2] through internal monitoring, including audits and on-site system checks. Additionally, network QA is assessed through an independent audit program managed by EPA. Annual Performance Evaluation (PE) audits at most CASTNET sites are performed by Environmental Engineering & Measurement Services, Inc. (EE&MS). The remaining sites not audited by EE&MS receive PE audits by state, local, or tribal agencies to fulfill the annual PE audit requirement. EE&MS also assesses compliance with the CASTNET QAPP through a Field Systems Audit (FSA) at every CASTNET site every other year following protocols listed in the EPA QA Handbook.[3] The FSA is a complementary component to the facility technical systems audit (TSA) performed by another independent auditor at both the EPA and NPS/BLM-WSO contractors' operations centers every third year.

Both the EPA-sponsored and NPS-sponsored O_3 monitoring programs began before 1990. While the NPS-sponsored O_3 monitoring program was designed to meet O_3 monitoring regulations from the beginning, the EPA-sponsored O_3 monitoring program was not. All EPA-sponsored O_3 monitors were upgraded by 2011 to comply with the requirements in 40 CFR Part 58. EPA replaced the existing O_3 analyzers with a pair of Thermo Scientific™ Model 49i analyzers, where one analyzer has an onboard O_3-generator for use as an on-site transfer standard. The upgrade of the EPA-sponsored O_3 analyzers resulted in an improved ability to evaluate the quality of the ambient data.

The EPA uses CASTNET O_3 and trace-level gas data to calculate design values for all sites where data completeness requirements are met. The CASTNET program follows QA/QC procedures and schedules to meet the regulatory requirements detailed in Appendix B of this plan. This document includes an overview of the CASTNET regulatory O_3 and trace-level gas monitoring program, a description of the internal and external QA programs, any planned changes to the network, and a description of each monitoring site. The procedures in this Network Plan originate from the requirements found in 40 CFR Part 58.10, but are adapted to a federally operated national monitoring network.

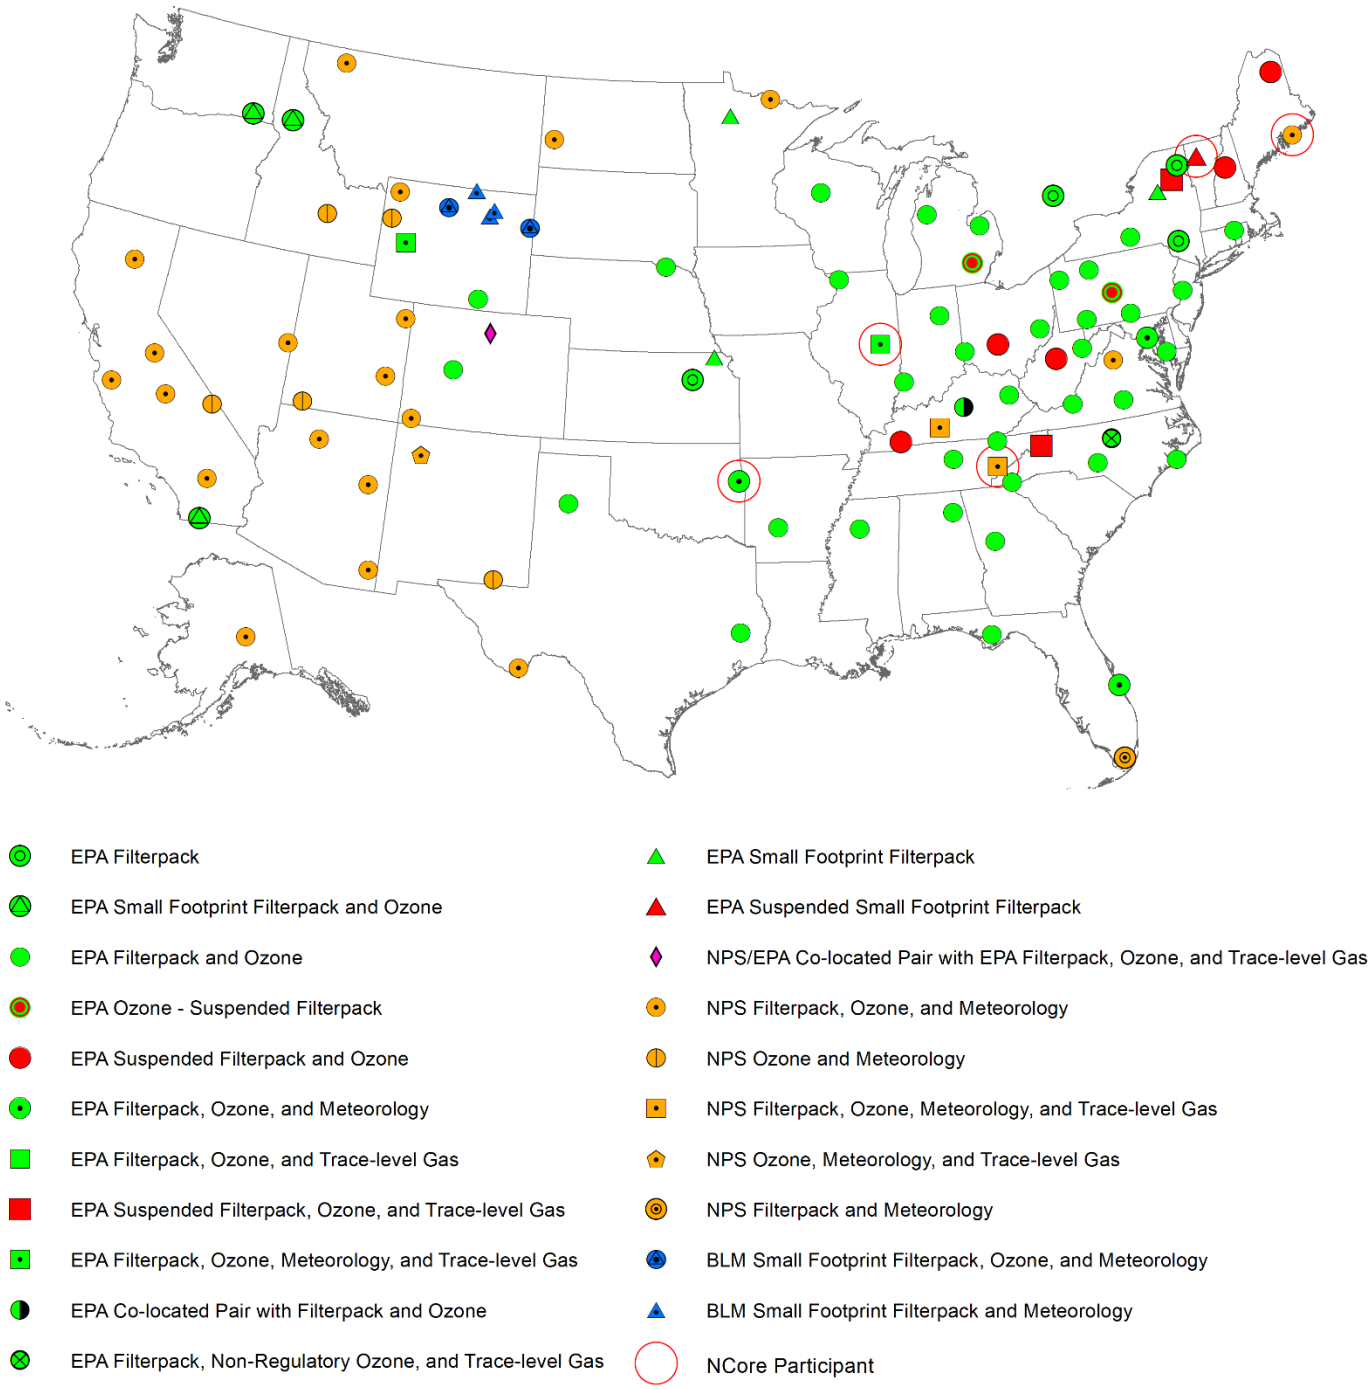

Figure 2. Active and Suspended CASTNET sites in 2023 Green shapes represent EPA-sponsored sites. Red shapes indicate EPA-sponsored sites that suspended some or all monitoring activities in May 2022 due to budget constraints. Orange shapes represent NPS-sponsored sites. The purple diamond represents a co-located pair of NPS-sponsored ozone and filterpack monitoring and EPA-sponsored ozone, filterpack, and trace-level gas monitoring. Blue shapes represent BLM-Wyoming State Office-sponsored sites. National Core network (NCore) sites are identified with a large red circle. For a list of which sites are in each category see Appendix J of this plan. A list of sites with suspended monitoring is included in Appendix K of this plan.

2. Ozone and Trace-level Gas Data

CASTNET monitors measure ambient O_3 concentrations for the entire year, which extends beyond the required O_3 season for many states. CASTNET submits ambient concentrations in near real time to AIRNow[4] and reports hourly data and nightly QC results to the CASTNET website daily for sites where EPA, NPS, or BLM-WSO is the primary quality assurance organization. NPS also displays O_3 and meteorological data on the Gaseous Pollutant and Meteorological Data website[5] and the BLM-WSO distributes O_3 data through the Wyoming Air Resource Monitoring System (WARMS) website.[6] WSP and ARS submit the O_3 and trace-level gas concentrations to EPA's Air Quality System (AQS) database on a monthly basis and daily 1-point precision results on a quarterly basis. EPA submits O_3 data from two co-located monitors (ROM206 and MCK231) to AQS, but these data are identified as 'NAAQS Excluded' because these data are solely used for QA purposes and are not used to calculate design values.

CASTNET also measures ambient trace-level gas concentrations including SO_2 and CO at Bondville, IL as required by the NCore program for the entire year. CASTNET reports ambient trace-level gas concentrations to the CASTNET website daily.[7] WSP and ARS submit the hourly and 5-minute (SO_2 only) trace-level gas concentrations to the AQS database on a monthly basis and daily 1-point precision check results on a quarterly basis. The trace-level gas measurements reported by EPA are certified for comparison against the respective NAAQS, while NPS does not certify their trace-level gas measurements.

CASTNET uses the measurement quality objectives and criteria gas validation templates described in the EPA QA Handbook Validation Template[8] (reproduced in Appendix B of this plan) to ensure that the highest quality data are being submitted to the AQS. These tables describe operational and systematic criteria for O_3 and trace-level gas data validation, including requirements for frequency of measurements or audits, calibration schedules, and acceptance criteria for QC checks. One-minute data collected for ambient O_3 and trace-level gas measurements are used for data validation purposes and are stored indefinitely.

In addition to the QC checks required for meeting the measurement quality objectives and validation templates, semi-annual (O_3) and quarterly (SO_2 and CO) system checks are performed at each CASTNET site. Using National Institute of Standards and Technology (NIST) terminology, we define levels as degrees of separation from a NIST standard reference photometer (Level 1). During these checks, a field operations technician challenges the on-site analyzer and re-verifies the on-site transfer standard, calibrates the on-site analyzer to the traveling transfer standard (Level 2) as needed, and verifies the data logger and the shelter temperature probe using NIST-traceable standards. All on-site O_3 transfer standards at CASTNET sites are NIST-traceable at Level 3. A flow chart diagram of the data certification process for the EPA contractor, WSP, is illustrated in Appendix D of this plan.

Following guidance in 40 CFR Part 58.15, CASTNET federal managers from EPA, NPS, and BLM-WSO submit their annual data certification letter, including the AQS Data Certification Report (AMP600), to the EPA Office of Air Quality Planning and Standards (OAQPS) and applicable EPA Regional Offices by May 1 of each year. Consistent with 40 CFR Part 58.10 (a)(1), each analyzer included in Appendix G of this plan meets the siting and operational criteria required in appendices A, C, D, and E of 40 CFR Part 58 as identified for each year, except DUK008, as noted.

3. Exceptional Events

Exceptional events are unusual or naturally occurring events that can affect air quality, but are not reasonably controllable using techniques that state, local, or tribal (S/L/T) air agencies may implement in order to attain and maintain the National Ambient Air Quality Standards. Exceptional events include wildfires, stratospheric ozone intrusions, and volcanic and seismic activities. Following guidance in 40 CFR Part 50.14(a)(1), a state may request that EPA exclude data that exceed the NAAQS and may have

been impacted by an exceptional event. As noted in the preamble to the 2016 Exceptional Events Rule (81 FR 68216, 10/3/2016),[9] "as the single actor responsible for administering air quality planning and management activities within its jurisdictional boundaries, the state, exclusive of tribal lands, is ultimately responsible for submitting exceptional event demonstrations for exceedances that occur at all regulatory monitoring sites within the boundary of the state."

CASTNET federal partners will work with S/L/T air agencies to include a flag in AQS for ambient data potentially influenced by an exceptional event, as requested by a S/L/T air agency that has jurisdiction over the area where a CASTNET site is located, and assist in preparing a demonstration (i.e., providing relevant information) if requested. The initial data flag is denoted as informational-use only and flagged data will continue to be used for NAAQS attainment purposes until the EPA Regional Administrator provides approval for an exceptional event demonstration.

State agencies will be responsible for working with the EPA region to submit exceptional event demonstrations, which may include data from CASTNET sites. CASTNET managers do not have the authorization to determine the sufficiency of an exceptional event demonstration or whether CASTNET monitoring data should be excluded from the NAAQS calculation. S/L/T agencies should follow the regulations described in the revision to 40 CFR Parts 50 and 51, Treatment of Data Influenced by Exceptional Events (81 FR 68216, 10/3/2016), to prepare and submit exceptional event demonstrations.

To request that CASTNET managers apply initial data flags to CASTNET O_3 data potentially impacted by an exceptional event, a S/L/T agency should email the following information to Timothy Sharac (sharac.timothy@epa.gov) for EPA-sponsored sites, Barkley Sive (barkley_sive@nps.gov) for NPS-sponsored sites, or Ryan McCammon (rmccammon@blm.gov) for BLM-sponsored sites:

- date/time range of incident,
- type of exceptional event, and
- CASTNET site(s)

Initial data flags will be applied within 30 days after CASTNET managers receive a request from a S/L/T agency. Exceptional event types and their associated AQS qualifier codes are listed on the AQS Code List webpage.[10]

4. Network Audit Requirements

The network audit requirements for 40 CFR Part 58 compliance are summarized in Appendix B of this plan. CASTNET managers include the PE and FSA schedules with each Annual Network Plan to ensure EPA Regional Offices have the opportunity to make travel arrangements if they choose to attend the audit. The EPA Regional Office contacts are listed in Appendix E of this plan.

5. Quality Control Checks

Automated zero/precision/span (ZPS) quality control checks are performed nightly on all CASTNET ozone analyzers as shown in Table 1. EPA-sponsored ozone analyzers also receive additional weekly QC checks at 30, 90, and 150 ppb on Sundays to verify analyzer accuracy spanning typical ambient ozone concentrations. Additional checks may be initiated remotely to troubleshoot potential issues that may arise. The criteria for the automated ZPS QC checks are included in Appendix B of this plan. Zero, precision, and span QC results are posted to the CASTNET website daily for EPA-sponsored CASTNET sites.

6. Performance Evaluations (PE)

In accordance with EPA's QA Handbook and 40 CFR Parts 53 and 58, an independent auditor performs an annual PE audit and submits these results to AQS on a quarterly basis. Verification of the O_3 and trace-level gas analyzers during the field systems audit (FSA) requires that the zero/span be within ±2% of the full scale of the best fit linear line. The auditor selects target concentration values among the ten audit levels, as described in Appendix A to 40 CFR Part 58.[11] The evaluation is made by challenging the analyzer with audit gas standards of known concentration from a minimum of three audit levels that represent routine concentrations at the monitoring site (see Table 2 for acceptable audit ranges). Results for audit levels 1 and 2 must be less than ±1.5 ppb or less than ±15.1%, whichever is less restrictive, to meet the acceptance criteria for O_3, SO_2, and NO_2, while levels 1 and 2 must be less than ±0.031 ppm or less than ±15.1%, whichever is less restrictive, to meet the acceptance criteria for CO. Results from levels 3-10 must be less than ±15.1% to meet the acceptance criteria.

Table 2 Note: 40 CFR Part 58 Appendix A – Quality Assurance Requirements for Monitors used in Evaluations of National Ambient Air Quality Standards.[11] The target audit levels used for PE audits for CASTNET O_3, SO_2, and CO measurements are highlighted in bold font.

The proposed PE and FSA audit schedule for CASTNET sites is shown in Table 3 below. The independent auditor uses equipment that is NIST-certified (verified twice per year) to audit CASTNET monitoring equipment. The independent auditor performs a PE audit at each site annually and performs an FSA which includes an audit of flow, meteorological sensors, and related parameters every other year. States may perform a PE audit if they coordinate with the sponsoring agency, site supervisor, and independent auditor as explained in the third-party CASTNET audit document.[12]

7. Field Systems Audit (FSA)

An independent auditor performs a field systems audit (FSA) every other year at each CASTNET site to complement the requirements of a technical systems audit (TSA) which is required every three years to ensure network-wide consistency among all sites within CASTNET. The purpose of an FSA is to provide an independent assessment of the siting criteria, performance of monitoring equipment, and the proficiency of the site operator. The auditor verifies that filter pack flow, the O_3 analyzer, shelter temperature, and the meteorological sensors meet the acceptance criteria listed in Appendix B and the CASTNET QAPP.[13] The auditor also completes a PE audit for O_3 in addition to an FSA to verify there are no line losses within the system and documents whether the monitor configuration violates any of the CASTNET siting criteria found in the CASTNET QAPP. During an FSA, the auditor discusses any issues related to equipment, siting criteria, or operator handling with the operator and/or site supervisor. The independent auditor submits audit results to the site supervisor, site operator, site funding agency, and CASTNET contractor following the audit. A summary of audit results is available in a quarterly report and posted to CASTNET's Independent Audit Program webpage.[14]

The independent auditor sends FSA announcement letters to the agency contractor, site operator, and site sponsor describing the purpose of the site visit 2-4 weeks prior to an FSA to ensure all parties involved are prepared. The current proposed schedule is shown in Table 3.

8. National Performance Audit Program (NPAP)

The purpose of the NPAP is to assess the proficiency of the monitoring organization. As the primary sponsor for CASTNET, EPA's Clean Air Markets Division coordinates with OAQPS, EPA Regional Offices (listed in Appendix E of this plan), and the Environmental Services Assistance Team (ESAT) to fulfill the NPAP requirements for all CASTNET sites. Each monitoring organization's network is required to complete NPAP audits, with a goal of 20% of the sites each year or 100% within 6 years. Through-the-probe audits are performed during an NPAP audit using a zero air generator to supply the carrier gas to an O_3 generator. Audit O_3 concentrations are delivered to the through-the-probe dual glass manifold connected to the monitor's inlet probe while venting excess flow to the atmosphere. The O_3 generator is referenced back to a Level 2 O_3 standard which is in turn referenced to a Level 1 standard reference photometer. The auditor selects 3 or 4 known target concentrations to determine the accuracy of the on-site O_3 analyzer. The O_3 NPAP audit's percent difference criterion of less than ±1.5 ppb at audit levels 1 and 2 and less than ±10.1% at audit levels 3 through 10 is more rigorous than the criteria used for the annual performance evaluations in Table 2. The NPAP auditor is responsible for submitting the audit results to AQS. NPAP audits are also performed on CO and SO_2 analyzers, when present.

9. Technical Systems Audit (TSA)

CASTNET uses an independent auditor to conduct the facilities portion of the TSA requirements at the contractor's O_3 laboratory once every three years. The purpose of the facility TSA is to provide a qualitative appraisal of the total measurement system. Site planning, organization, documentation, and operation are evaluated to ensure that good QA/QC practices are being applied throughout the monitoring program. An outline of the facility TSA is available in Appendix F. RTI International performed facility TSAs at the WSP laboratory in Newberry, FL in 2012, 2015, and 2018 and at the ARS facility in Fort Collins, CO in 2013, 2017, and 2021. Results, findings, and the responses to the findings can be found on the CASTNET documents webpage[15] under "Technical Systems Audit."

10. Annual Monitoring Network Plans and Network Assessment

CASTNET staff prepare an annual CASTNET Network Plan for public review. The Network Plan focuses on the CASTNET O_3 and trace-level gas monitoring program and addresses the monitoring requirements of 40 CFR 58.10(b). EPA, NPS, and BLM-WSO consult with OAQPS and applicable EPA Regional Offices ahead of adding or discontinuing O_3 monitors in accordance with 40 CFR 58.14 and any known changes are included in this Network Plan. CASTNET staff collect additional comments by sending draft copies to the National Association of Clean Air Agencies (NACAA) and the Association of Air Pollution Control Agencies (AAPCA). A draft copy is also distributed through OAQPS' monitoring list-serve. CASTNET staff contact states directly if these states use a CASTNET monitor in place of a state operated O_3 monitor (e.g., SLAMS) to ensure their participation in the planning process. CASTNET staff submit a final version of the Network Plan and responses to any comments received on the draft Network Plan to the EPA CASTNET O_3 webpage[16] and OAQPS' Ambient Monitoring Technology Information Center (AMTIC) Network Plans webpage.[17] The schedule for these activities is outlined in Table 5. The Division Director or a designee at the EPA's Clean Air Markets Division approves this plan with input from the public by July 1. OAQPS provides comments within 120 days on any plans proposing changes to the O_3 network.

Table 4 Annual Network Plan Schedule

Date	Network Plan Steps
May 16	Distribute draft Network Plan to OAQPS, OAQPS list-serve, EPA Regional Offices, NACAA, AAPCA and post for public review on the CASTNET webpage
June 16	Deadline for public comments to draft Network Plan
June 30	CASTNET staff complete response to public comments
July 1	CASTNET staff distribute final version of Network Plan
October 31	OAQPS/Lead EPA Regional Office review Network Plan and provide approval

EPA completes a network assessment every 5 years in accordance with 40 CFR 58.10(d). CASTNET staff post the network assessment to the EPA CASTNET O_3 webpage[16] and OAQPS' AMTIC Network Plan webpage.[17] There is no public comment review and response to this document. The next assessment is due July 1, 2025, and every 5 years thereafter.

Some states include CASTNET sites in their Network Plan to fulfill their monitoring requirement under 40 CFR Part 58 Appendix D. These states should notify the CASTNET agency sponsor that they will be using the CASTNET site in their plan so that the state may be included in any discussions related to changes at the site.

11. Network Modification

As of June 2023, the following network modifications occurred or are planned:

- On May 10, 2022, the United States Environmental Protection Agency (EPA) suspended monitoring at 11 CASTNET sites due to budget constraints. See Appendix K for a list of sites where data collection was suspended. Sites were "mothballed" rather than decommissioned to allow the Agency to review the current status of the network and resume sampling if funding was made available.
    - EPA's Office of Atmospheric Protection (OAP) requested a scientific review of the CASTNET program and its contribution to the National Atmospheric Deposition Program (NADP). The review is a public process managed by EPA's Science Advisory Board (SAB) and a panel of experts that have been asked to advise the Agency on the scientific merits of the programs. The review panel will consider options for CASTNET under the current budget constraints while meeting EPA's strategic objectives, as well as evaluate new and emerging scientific and policy questions that could be addressed by CASTNET.
    - OAP will use the report provided by the SAB review panel, public comments, and information gathered from stakeholders and partners to design a more robust CASTNET program that meets the current annual operating budget requirements.
- On October 1, 2022 Santee Sioux (SAN189, 31-107-9991, POC 1) resumed CASTNET filter pack measurements that were suspended on May 10, 2022.
- Monitoring at the Alhambra, IL CASTNET site (ALH157, 17-119-9991, POC 1) was discontinued on December 6, 2022 due to the loss of the land lease. A new location has been identified and sampling may resume if funding allows.
- Filterpack measurements at Wind Cave National Park (WNC429, 46-033-0132, POC 3) were discontinued on December 27, 2022.
- With support from EPA Region 9 and Office of Air and Radiation (OAR), CASTNET added the 8th Tribal site in partnership with the La Posta Band of Diegueno Mission Indians of the La Posta Indian Reservation, California (La Posta). The small-footprint site with a regulatory ozone monitor was installed in January 2023 in eastern San Diego county (LPO010, 06-073-9991, POC 1).
- A Nafion drier was installed on the co-located, QA-only O_3 monitor (MCK231, 21-229-9991, POC 2) in Mackville, KY on March 14, 2023 to assess any biases introduced. The primary monitor (MCK131, 21-229-9991, POC 1) is continuing to operate without a Nafion drier.
- Mammoth Cave, KY (MAC426, 21-061-0501, POCs 1 and 5) is scheduled to end sampling of NOy, CO, and SO_2 by July 31, 2023.
- Theodore Roosevelt, ND (THR422, 38-007-0002) is scheduled to end sampling of CASTNET filter pack measurements by July 31, 2023.
- At the request of the Tribe, CASTNET will relocate the Santee Sioux CASTNET site (SAN189, 21-061-0501, POC 1) in the Fall of 2023. The relocated site will be adjacent to the Tribal Environmental Offices (42.746645, -97.928100), approximately 10.9 km from the current location. The site will obtain a new AQS and CASTNET site ID.
- Petrified Forest (PET427, 04-017-0119, POC 1) is scheduled to end sampling by December 31, 2023 due to the recent discovery of Native American artifacts near the monitoring shelter.

12. Data Reporting and Certification

CASTNET staff submit applicable ambient and quality assurance data to AQS within 90 days after the end of each quarterly reporting period. CASTNET complies with the annual air monitoring certification requirements in accordance with 40 CFR 58.15-

16. EPA, NPS, and BLM-WSO certify CASTNET ambient O_3, SO_2, and CO data and quality assurance results by May 1 for the prior calendar year for their respective CASTNET sites and submit the data to OAQPS for review.

Appendix A. Detailed Site Information (Page 1 of 87)

CASTNET O_3 and trace-level gas monitors meet the siting criteria as specified within 40 CFR Part 58 Appendices D and E. Following guidance from 40 CFR Part 58.10b, the following detailed information required for each CASTNET monitor is listed in the following pages ordered by AQS ID.

The following parameters are the same at all CASTNET sites:

- Current sampling frequency is continuous
- Sampling season is 01/01 – 12/31
- Frequency of one-point QC check is daily

[1] Design values are displayed for the 2019-2021 sampling period when data completeness requirements are satisfied. These values originate from OAQPS' Air Trends website: http://epa.gov/airtrends/values.html

[2] CBSA = Core Based Statistical Area - A statistical geographic entity consisting of the county or counties associated with at least one core (urbanized area or urban cluster) of at least 10,000 population, plus adjacent counties having a high degree of social and economic integration with the core as measured through commuting ties with the counties containing the core.

Definitions of statistical areas are from the Office of Management and Budget Federal Register Notice Vol 65, No. 249. December 27, 2000.

[3]POP. = CBSA 2014 Census from OAPQS' AIRSRAQS.CORE_BASED_STATISTICAL_AREAS Census Population Data
