

# CyANWeb Application

*Cyanobacteria Assessment Network App*

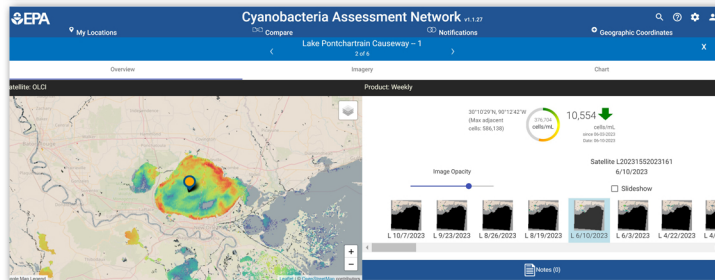

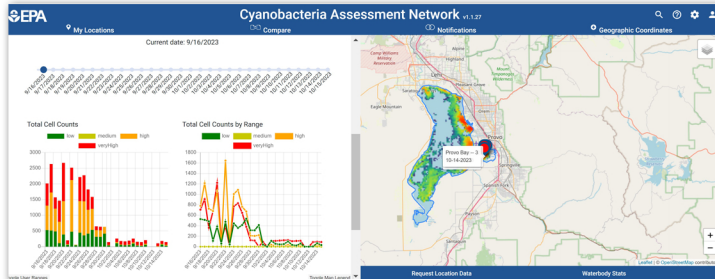

EPA's CyANWeb application is an easy-to-use and customizable app that provides access to algal bloom satellite data for over 2,000 of the largest lakes and reservoirs across the United States. EPA scientists developed the application to help local and state water quality managers make faster and better-informed management decisions related to cyanobacterial blooms.

CyANWeb is a web browser-based interface available on EPA's website that will work with any operating system and is compatible with most devices.
